

Wozart launches affordable Smart home devices to help save energy in Indian homes .

Works with Apple HomeKit, Google Home, Amazon Alexa and Samsung SmartThings.

Telangana, Hyderabad, Apr 21, 2021 (Issuewire.com) - Hyderabad, India:

- Wozart Smart devices will keep you connected to your home from anywhere, anytime.
- Wozart Smart devices are designed, engineered, and assembled out of India with the goal of increasing energy efficiency in homes for a sustainable future while providing never seen before convenience.

Wozart provides India's most advanced smart home solution that makes your home a voice-controlled, secure, and energy-efficient smart home. Wozart made its foray into smart home devices in May 2018 with its first product, Aura Switch, a Switch Controller that fits behind standard switchboard and enables control of connected appliances and lights through voice and touch using phones, tablets, speakers, televisions, and more.

After bringing innovative products for switch control, this time the company is all geared up to launch products for smart lighting, curtains, gates, sensors, and universal remotes. Wozart's products are easy to install, simple to use, and interoperable with all the major smart home ecosystems in the world - Apple HomeKit, Google Home, Amazon Alexa, and Samsung SmartThings, all in parallel, thus making Wozart's solution the most widely interoperable smart home solution in the world and providing compatibility with thousands of third party products.

Wozart's smart devices are retrofittable into existing homes – they can be installed without requiring any changes to the home's electrical wiring.

Appliances can be customized by name, location, and controlled through Siri, Alexa, the Google Assistant, Bixby, the Apple Home app as well as the Wozart app in addition to the physical switches.

The key noteworthy features of Wozart's smart home solution are:

Voice Control:

Say simple voice commands like “Hey Siri, turn off the lights” or “Ok Google, it's Movie-Time” and watch your home respond.

Scheduling & Location-based triggers:

Set your house on auto-pilot mode by scheduling frequently used appliances such as geysers, air conditioners, and lights. With Wozart you can automatically trigger appliances and lights based on your phone's location. Using this feature, you can have your home pre-cool itself and be at the right temperature as you step in. You can also save energy by switching off all non-essential appliances when the last person leaves the geo-fence around your home. Attend to essential and important things in your life while Wozart takes care of your home.

Mood based controls:

Set the perfect ambience at the right time by creating scenes that allow control of multiple appliances and lights instantly with a single tap or a command. Be it an exciting game night or a flamboyant house party, you can set your desired ambience in a snap.

Remote & Shared Access:

With the Wozart app & AI-powered voice assistants, you can control and monitor your home from anywhere, anytime, and using any smart device. Invite your friends and family to access your home by sending a simple invite on the Wozart app or the Apple Home app.

Wireless and Compact design:

The ergonomic design of the products makes installation hassle-free with no rewiring. With a hub-less architecture, Wozart devices are modular and can be used to automate any scenario, from a single Switch to a complete building.

Talking about the new launch, Manoj Malineni, CEO of Wozart said, *“Wozart’s devices and software are designed to offer a world-class smart home experience at affordable prices to Indian consumers. After extensive research and development, we have built a future-proof product range that works with all the major smart home ecosystems; Apple HomeKit, Google Home, Amazon Alexa, and Samsung SmartThings. We are excited to see how our customers take advantage of the technology we have developed to build futuristic spaces to live in.”*

Starting today, Wozart’s new products; Switch Controller, Switch Controller Mini, Smart Plug, LED Orchestrator, and Motor Controller can be purchased at www.wozart.com/shop. The products retail at a starting price of just ₹ 2,999 and the basic solution to automate a 3BHK starting at ₹ 25,000.
