

Green Geeks Honest Speed Test Review Revealed

Is Green Geeks is right for you?

Tamil Nadu, Coimbatore, May 28, 2021 ([IssueWire.com](https://www.IssueWire.com)) - Charlie from [Wpdevshed](https://Wpdevshed.com) has recently reviewed one of the most eco-friendly web hosting systems in the world. He shared what he truly believes regarding the green web hosting provider is that GreenGeeks is on the very mission to become one of the leading web host platforms in the world.

Green Geeks has been in business for **more than 10 successful years** now. This super-fast web hosting system is a creation by Trey Gardner in 2008. Because of its advanced tech and unique features, Green Geeks is benefiting millions of users in the world every day. It is an impressive bastion for all those users that have an eco-friendly approach in the web hosting industry.

[Visit Official Green Geeks Website](https://www.GreenGeeks.com)

Because of the tremendous work of Green Geeks and its expert team today, Green Geeks is considered an incredibly healthy, stable, and successful company.

For new startup businesses, this is the perfect platform. You will be amazed at their exceptionally advanced features, available at such reasonable prices.

Their most popular feature is the Project Help feature, this feature assists you in creating blogs, sending professional emails, management of your website, forums, and if you have an online store, then it helps in that too.

Whether you are naive or an expert, Green Geeks is the best hosting platform for you. It has the most unique and easy-to-use cPanel. The best part is that Green Geeks offers an array of Unlimited offers like **unlimited bandwidth, unlimited webspace, unlimited hosting domains, unlimited business emails, with absolutely free website domains and site migration.**

If you are interested to know some of the most honest reviews about the Green Geeks speed test, then continue with the article.

Origin of Green Geeks

The background story of Green Geeks is really inspiring; they are a **hundred percent green organization** and probably the first in their industry to stand up against a very serious issue of carbon footprint. It is also listed in some of America's Fastest-Growing Companies.

As per the expert review of Charlie, Unique features and advanced technology does not make a cut for all the companies every time. A website or Platform has to be fast as well for establishing its rigid position in the market. A speedy website makes all the difference, said Charlie. He further stated, Nowadays there are only two categories of customers in the market. One is the Visitors, and the second is the customers that stay.

The main feature that makes the customer stay on your website is **smooth interface and Speed.**

[Visit Official Green Geeks Website](#)

If a website does not have incredible speed, the customer will leave the website for any other competitor. You might be able to convince the customer with advanced and unique features for some time, but sooner or later, the customers will change into visitors.

This is the reason the first feature that we ensured as a must-have in Green Geeks web host system is ***Superfast server speed***. The server speed impacts significantly as how fast your websites will load for the customers.

Results Of The Server Speed Testing

For testing the Speed, performance, and scalability of this web host system, we are running some tests on GreenGeeks.

GreenGeeks Load Testing

The performance of the most eco-friendly system, Green Geeks, during the Load testing round seems to be incredibly robust and stable. As per the results of this test, Green Geeks is significantly fast. As per the reviews of the test results, the experts say that Green Geeks showcased a ***stable and consistent performance throughout the testing process***.

Green Geeks' performance in our latest round of Load Impact testing was really strong. The load test shows very fast and consistent performance throughout the test.

As per the outcomes, the loading time as per an average user utilizing the system during our speed test is 0.612 seconds. This loading time is an improvement on the last results with no observable consequence on load speed even as the number of coexisting users scaled to 100. At the same time, the test shows no server request failures either, which caps off a splendid outcome.

Strangely their Pingdom test outcomes below happened marginally more unfortunate than the last round of testing. However, it is still generally great in comparison with the other competitors. Hence, they stay one of our main three proposals. Especially in the event that you are keen on the ecological effect of your facilitating, Green Geeks are a definitive decision.

Page Speed and Uptime of Green Geeks

During the multiple testing rounds, one other round is Page Speed and Uptime of Green Geeks system. In this testing round, ***the average page load speed shown by Pingdom resulted in a significant drop of 1.035s since its last test, which is highly robust progress.***

Moreover, Green Geek's uptime results in the current round are ***100% positive***. This result is as good as it can get. Its Y Slow number stopped at 88, which is quite impressive as it is the first good result amongst all the hosts we have tested.

How fast is the Green Geeks Server?

Half of the battle is won just by having a great speedy website. Speed plays a significant role in convincing your visitors to be on your website. Most of the websites lose visitors only because their web pages take too long to appear.

Now the question is why, how Green Geeks can provide such amazing speed. ***This is because the company operates its five data centers located in Chicago, Phoenix, Toronto, Montreal, and Amsterdam.*** One can choose any of their preferred data centers to speed up their servers.

Now the question is, how fast are Green Geeks, is there any way to check it? Definitely Yes, one can check the speed of these servers and also give grades to their speed. ***By using one of the best and most popular speed testers, [Bitcatcha](#), we scrutinized the speed provided by Green Geeks, at different locations, at a point in time. Following is the list of our chosen locations and the speed we received at these test site:***

US (W) - 66 ms

US (E) - 19 ms

London - 191 ms

Singapore - 455 ms

São Paulo - 151 ms

Bangalore - 324 ms

Sydney - 262 ms

Japan - 214 ms

Canada - 9 ms

Germany - 95 ms

With these amazing server speeds on [Bitcatcha](#), the Green Geeks was ranked A+ in the speed testing categories.

Benefits of Green Geeks web hosting system

There are numerous benefits of the Green Geeks Web hosting system. As we have mentioned above, it is entirely environmentally friendly, fast, and highly scalable. Its other benefits are as follows:

Green Greeks Provide 99.9% Uptime With utmost safety

Knowing that website data is safe is one of the biggest concerns people have when choosing a web host. ***That, and know that their website will always be up and running.***

In order to deal with these problems, they have done their best in normal operation and safety.

- ***Server monitoring***
 - ***Real-time security scan***
 - ***Apply updates automatically***
 - ***Enhanced spam protection***
 - ***Hardware and power redundancy***
 - ***Container-based technology***
 - ***Escrow account isolation***
 - ***Nightly data backup***

First, when hosting the solution, they use a container-based approach. In other words, your resources are included, so any other website owner will not have a negative impact on your resources due to a surge in traffic, increased demand for resources, or security breaches.

Next, to ensure that your website is always up-to-date, ***Green Geeks will automatically update WordPress, Joomla, or other content management system cores so that your site will never be attacked by security threats.*** In addition, all customers receive a backup of their website every night.

[GET GREENGEEKS HOSTING](#)

To combat malware and suspicious activity on your website, ***Green Geeks provides each customer with its own secure visual file system (VFS).*** In this way, no other accounts can access your

account and cause security issues. Additionally, if a suspicious object is found, it is immediately isolated to prevent further damage.

Moreover, you have the opportunity to use the built-in spam protection feature provided by Green Geeks to reduce the number of spam attempts on your website.

Finally, they monitor their servers in order to identify any problems before affecting customers and their websites. ***This helps maintain its impressive 99.9% uptime.***

Safe And Reliable Server Infrastructure

When it comes to virtual hosting, you need functionality, speed, and security. Therefore, Green Geeks uses a reliable infrastructure to build the entire system, ***which consists of 300% clean, renewable energy.***

There 5 data centers. ***You can choose Chicago (USA), Phoenix (USA), Toronto (Canada), Montreal (Canada), and Amsterdam (Netherlands).***

By choosing a data center, you can ensure that the target audience receives the content of your website as soon as possible.

In addition, you can expect data centers to have the following features:

- ***Grid power supply, backup battery***
- ***Automatic transfer switch and on-site diesel generator***
- ***Automatic temperature and climate control throughout the facility***
- ***24/7 employees, as well as data center technicians and engineers***
- ***Biometric and key card security system***
- ***FM 200 server safety fire extinguishing system***

Not to mention, Green Geeks has access to most major bandwidth providers, and their equipment is completely redundant. Of course, the server is also energy-efficient.

E-commerce Capabilities

All hosting plans (including shared hosting) have many e-commerce features, which would be great if you run an online store.

First, you will receive a **free wildcard SSL certificate** encryption to ensure that customers' personal and financial information is 100% secure. And, if you know something about SSL certificates, you know that wildcards are very useful because they can be used for **unlimited subdomains of a domain name**.

Next, if you need a shopping cart on the e-commerce site, you can use the **one-click installation of software**.

Finally, you can rest assured that **Green Geeks servers comply with PCI standards**, which can further protect your site data.

Exclusive Free Website Builder

Through their shared hosting, you can access the built-in Green Geeks website builder to make website creation a breeze.

Using this tool, you will get the following functions:

- **100+ pre-designed templates to help you get started**
- **Mobile friendly and responsive theme**
- **Drag and drop technology without coding skills**
- **SEO optimization**
- **24/7 support via phone, email, or live chat**

Once you have registered for Green Geeks hosting, you can easily activate this website builder tool.

About Green Geeks

Green Geeks is one of the most flourishing companies in the industry of web hosting **since 2008**. Since that year, the company is taking step-by-step actions to become the most leading environment-friendly green web host provider. The reason Green geeks is referred to as entirely eco-friendly is because of their contribution to the environment.

The amount of power this company consumes due to their work they put three times more of that power back to the environment. The company, by its operations into the grid, put back the power in the form of Renewable energy. Green Geeks, a web hosting platform, includes four major unique factors. The primary reason behind the success of this company is these four factors.

The company works on the **prime basis of Speed, Security, Scalability, and of course! The environment is friendly.**

With the aim to enable all the users to have a unique web hosting platform, this company started from Los Angeles, California, and is now reaching every corner of the world, is flourishing every day.

The target customers of Green Geeks in the initial stage were **individuals, bloggers, small businesses, content writers, and more**. However, now with millions of users, the environment-friendly system is reaching in over more than 150 countries. In case of any queries,
