

HyperCoin is Mooning faster than any Cryptocurrency in HISTORY

The community token Hypercoin has been breaking records on a daily basis, could this be the next crypto moon shot?

H Y P E R C O I N

New York, New York City, May 10, 2021 ([Issuewire.com](https://www.issuewire.com)) - [Hypercoin](#) has been making waves across social media due to the coin's powerful community story and its incredible growth. The Hypercoin community is a community of scam victims that aims to educate investors on how to spot and avoid cryptocurrency scams/rug pulls.

The community formed as a result of the \$Comet scam. A group of investors was active in the \$Comet voice chat on Telegram and in an instant, the rug got pulled. A majority stuck around in the chat for hours, bonded by our recent misfortune. The conversation was based around all things crypto, and especially around the recent prevalence of scams. One of the voice chat members stumbled upon Hypercoin. Hypercoin was only 10 minutes old at the time with a renounced contract and the original investors bought in with the intent of earning their money back and helping other victims do the same.

Soon, the group of investors realized the gem that they had stumbled into, decided to make it into something more, and the Hypercoin community was born. Hypercoin isn't just a cryptocurrency, it's a family. Their aim is to educate investors on how to avoid and spot scams as well as provide an opportunity for people to earn back their losses.

Hypercoin is 100% Community Driven. There is no developer, just an extremely hard-working team of community members and investors dedicated to the project. The mysterious developer who made Hypercoin immediately renounced ownership of the contract and challenged whoever found it to see what they could turn it into. It just so happened that a recently scammed group of people are the ones who found it.

80% of the coin was immediately burned by the developer before the contract was renounced. There is a 7% tax on transactions. 5% goes into locked liquidity and 2% is redistributed to all holders, including the burn wallet, thus burning supply with every transaction. The community is made up of people from all around the world, which allows there to be 24/7 Voice Chat and Support.

The voice chat is lively, educational, and supportive. It's where the magic of Hypercoin happens. In addition to getting to know each other and providing a place to commune with fellow community members, the community team of investors of all sizes discuss plans and investigate big sales by watching wallets. The top wallet holders are some of the most active members of the community and are regularly available in voice chat.

All top wallet holders are dedicated to the project. Any profits taken are done so in small amounts (.5-1BNB) and announced to the community so those that want to buy the dips can be prepared to do so. Members of the community team must share their wallets in order to gain access to the team chat, thus preventing swing trading based on marketing plans. The [Hypercoin Community](#) is dedicated to producing content that will educate investors of the dangers of scams and on how to avoid them.

Joining the community is easy, but do your own research first. Check out the [Hypercoin Chart](#). As well

as the [Hypercoin BSC Scan](#). You can buy Hypercoin on Pancakeswap as well. There is a reason they are calling Hypercoin the Bitcoin of AltCoins.
