

Momentum controls expands on Global Solution Engineering & Services portfolio with strong ICT and OT capabilities

Momentum controls set-up Momentum controls Software and Services, a niche Information, Communication and Operations Technology (ICOT) services firm, delivering End to End services across the Solution life cycle

California, San Jose, May 3, 2021 ([Issuewire.com](https://www.issuewire.com)) - Momentum controls, a leading System Integration, and Services Company announced today that it has set up a dedicated organization - Momentum controls Software and Services (www.momentumsoftserv.com), to have a continuous focus on expanding its Global Solution Engineering and Services portfolio. The entity will leverage Momentum's existing capabilities in ICT and OT, where it already has strong partnerships with leading global players as a Value-added Reseller, Managed Services Provider, System Integrator, or Technology partner, in the areas of Networks, Enterprise Applications, Cyber and Electronic Security, Cloud, Unified Communications, Datacenters, Building Management, IoT and others.

Nihit Bansal, an industry veteran in this domain has partnered with Momentum controls and will be leading Momentum controls Software and Services as CEO, to spearhead this growth journey. Nihit has over 15 years of experience with leading products and services companies such as Siemens, Altran (part of Capgemini), and others. He has been a Transformation leader and in his past roles, has

successfully built and led such portfolios from the ground up. He has always been admired for his unique ability to blend technology & business together and build trust, value driven partnerships with the customers.

“We strongly believed in this joint vision for the company and Nihit was the best fit to take on this role as he is an expert in this area and also has experience of turning around operations for both SME and Large organisations to multi-fold revenue and profitability growth in a span of a couple of years. We look forward to a great growth journey ahead for Momentum Controls Software and Services under his strong Leadership”, says Amit Sharma, one of the Board of Directors of the organisation.

“In my professional career, I have always strived to deliver value to my customers and people, ensuring a long-trusted association from both sides. For me, if a CEO acts as a Customer and Employee Officer first and takes a genuine interest in customer’s success and care of his people then the business and organisation are bound to flourish. I have observed that the majority of similar organisations are losing on this key aspect and the gap between the customer and employee expectations, out of a relationship is ever increasing in the industry. At Momentum controls Software and Services, the whole foundation is laid on this very principle with a mission to help organisations gain MOMENTUM and be in CONTROL of their Solution and Services transformation journey, ensuring their success in this continuously evolving Digitally Connected World. To achieve this we have very robust plans to further build upon our deep Information, Communication & Operational technology (ICOT) expertise and bring best of Solutions and Services delivery capabilities to our customers.” Nihit Bansal said.
