Germany, Land Nordrhein-Westfalen, Jun 15, 2021 ([IssueWire.com](https://www.issuewire.com)) - [Remotewx](#) is a remote job board on the web to help you find a career where you can work remotely from anywhere. It only accepts listings for job positions that are 100% remote. Most of the companies' remotewx shares are distributed or remote-first companies.

But: *"Does the world need another job board?"* No. But many friends of the founder of Remotewx are still unable to find a remote job. Why? It is because many job boards do not differentiate between covid-remote and full-time remote. A company that is fully distributed from the ground up is not the same as a company that offers work from home during covid.

Remotewx has lots of love for companies that are fully distributed and only hire remotely.

Remotewx is completely bootstrapped! It is a true MVP by design. To achieve the best user experience and fastest loading time, it doesn't use any framework or website analytics. We also do not use cookies.

Remotewx was founded in 2019 by [Lucas Mengel \(Link to LinkedIn\)](#) and took off vertically like a rocket during the corona pandemic. Remotewx was a side project until 2021. Today, the founder is looking for employees himself.
