

Arlo vs. Ring Review 2021: Which Home Security System is Better?

Alabama, Alabaster, Jul 13, 2021 ([Issuewire.com](https://www.issuewire.com)) - Arlo vs. Ring Review 2021: Which Home Security System is Better?

In this [Arlo vs. Ring review](#), we'll look at a head-to-head matchup between Arlo and Ring. Which is better?

Both companies are known for producing some of the best smart home cameras on the market, which may make you feel safer at home while also monitoring your property when you're away.

Are you in the market for a new home security system? Then this Arlo vs. Ring Review will help. The digital industry is brimming with high-end cameras with built-in smart capabilities that may increase your home security when you're within and MIA, as well as make simple activities like interacting with a delivery driver, much more suited to a hectic lifestyle.

With so many home security systems to select from, it can be difficult to know which product or brand to trust with your money and your family's protection. We're here to help you feel less overwhelmed by breaking down the most important things to consider during the buying process.

We'll be dissecting an in-depth comparison of the top factors for each of the brands' extensive range of home security cameras. Arlo and Ring are the two most well-known brands for smart features and optimal safety, and we'll be unraveling an in-depth comparison of the top factors for each of the brands' extensive range of home security cameras.

Pricing and Range Comparison

The amount you pay upfront and on a monthly basis can influence the brand you choose to purchase from. If you're afraid of being alone in your house or routinely leave your property unattended while on vacation, spending a substantial number of money can be justified.

Ring's lowest security camera that is suitable for outdoor use costs \$99.99. Alternatively, Arlo's most affordable outside camera costs \$99.99. (Arlo Essential).

The spectrum of equipment, which includes both indoor and outdoor cameras, can make a huge difference in the Arlo vs. Ring argument. If you have specific features in mind, having a larger selection of products to pick from might make a great difference. Ring offers more than six security cameras, including the Spotlight Cam Battery and Spotlight Cam Solar, which are available on Arlo's website.

Subscription Plans

You might require a monthly membership package to get the most out of your home security system. Both brands, fortunately, offer a free plan. However, if you want additional storage and sophisticated

capabilities, you'll need to upgrade. You'll get live video streaming and notifications with Arlo's free plan. Ring's free plan, on the other hand, is far more generous. Instant notifications, live video streaming, two-way communication, and lifelong theft prevention are all included.

Ring offers two extra plans for those who desire extra security and features: Basic (\$3/month for one device) and Plus (\$10/month for all devices).

It's worth noting that Ring's website doesn't say how many devices this Plus plan can support, so it may be an unlimited number, but that's a bit confusing. Premier (\$2.99/month for one device) and Elite (\$4.99/month for one camera or \$14.99/month for five cameras) are two more programs offered by Arlo.

The subscription fees for the two brands appear to be similar at first sight. Although Arlo's Elite plan offers a significant price difference between \$4.99 and \$14.99, if you simply want a monthly subscription plan for two cameras, for example, you'll be in a tight place.

What's more, what features do you receive for your money with both brands' most advanced plans? Except for a few differences, most of the characteristics for both brands are the same. The storage strategy is an important component of a home security system. If you run out of memory, you won't be able to save crucial information, which could cause problems later. Ring claims to save the footage for up to 60 days, while Arlo only offers half of that amount of Cloud storage.

But don't dismiss Arlo's Elite plan just yet — for \$4.99, you'll gain access to the brand's e911 Emergency Call Service, which is an incredible feature in which the business knows which responders are closest to your home and can even disclose your location before you tell them. This remarkable trait has the potential to save a person's life, making it helpful to everyone.

Battery Life Span

The battery life of Arlo's outdoor security cameras is six months between charges. Ring, on the other hand, claims that their wireless camera range has a battery life of up to 12 months, however, this varies depending on the number of activations. Solar versions are available from both brands for less frequent recharging.

Application Features & Design

You'll need a user-friendly design that's not too difficult to use with live monitoring and other capabilities from the apps. Let's look at the application features and design for this Arlo vs. Ring review.

The ring allows you to receive criminal alerts from your neighbors via the app. The app is also where you'll get notifications when the camera detects motion — which may be in one of the pre-defined zones. You can see and speak with visitors using the app. Alternatively, you can check in to see how your home's interior and exterior are doing in real-time. Furthermore, while Ring works with Amazon Alexa, it does not work with Apple HomeKit.

Arlo, on the other hand, offers rich notifications and image previews, as well as HomeKit connectivity and compatibility with the Apple Watch app. Arlo also allows you to respond to alarms without having to unlock your phone.

Smart Home Integration

Both Arlo and Ring cameras and doorbells will work with speech assistants, allowing you to chat with anyone in the camera's field of view and view a live feed from the camera on the best smart displays using the finest smart speakers.

Arlo is the clear winner here, as all of their home security cameras and video doorbells work with Amazon Alexa and Google Assistant, and some of their devices even work with Apple HomeKit, with further compatibility for Apple's system coming soon to some of the new items, such as the Arlo Video Doorbell.

Ring's cameras and video doorbells are exclusively compatible with Alexa, which isn't surprising given that Amazon bought the firm in 2018. Ring devices are an obvious choice if you have Alexa installed in your house.

Ease of Installation

Ring — The genius of Ring (and Arlo!) is in the ease with which it may be installed. You won't need any equipment, and you won't have to drill holes in walls or splice wires. All you'll need is a few minutes and some DIY zeal. If you get stuck, Ring provides plenty of instructions and a fantastic help center to help you out.

Arlo — With Arlo's camera-based home security, users may be up and operating in 30 minutes or less. The system is designed to be installed by the user. The cameras can also be mounted in almost any place. If you buy one of Arlo's premium kits with six or more cameras, you should budget an hour or two for installation. Arlo's Support Center will assist you if you encounter any difficulties.

Conclusion of Arlo vs. Ring

Price, battery life, app use, smart features, image and video quality, and other criteria all play a role in determining the best home security system for you. Don't forget that both companies have a selection of smart doorbells. You may use these doorbells with your cameras and even leave preset messages for delivery people or visitors.
