

Gerard Peters: Delivering winning Crypto Solutions To Clients And Investors

New York, New York City, Jun 21, 2021 ([IssueWire.com](https://www.issuewire.com)) - Gerard Peters is the founder and current CEO of QuantifAI Technologies. In 2018, he led a global team of FX traders, IT professionals, quant engineers in an enthusiastic mission to create the world's first – risk-free trading strategies to offset market volatility that was ongoing in the tumultuous Trump era.

The journey was remarkable for the innovative trading strategies that were developed. These strategies were peer-reviewed and consistently delivered a 30% ROI. The results were a source of great satisfaction and pride for Gerard who was singularly focused on providing profitable returns to his investors.

Gerard has kudos and accolades for his professional team.

“Our global team of professional quants, algo-traders, and technologists have designed this system for daily and easy net cash flow realization.”

Gerard Peters And His Scientific Approach to trading

[Gerard Peters](#) applied extensive scientific research-backed formulae in creating the winning strategies in his trading system.

Gerard elaborates: *“We believe that by applying intricate data analysis and employing structural Artificial Intelligence and Machine Learning practices, the system produces consistent and reliable risk-adjusted returns for our clients ”*

The system automates trade entries in both the spot and futures markets and efficiently identifies a safe space between the meteoric rise and drops in crypto markets.

This is a market-neutral investment strategy that is capable of generating returns independent of market directionality and volatility.

All positions are maintained in the USDT base, removing the risk of [cryptocurrency](#) market volatility. Investors' positions are fully hedged because the system trades in a uniform base and maintains a fully locked hedge for underlying altcoin positions.

The QuantifAI SMA

Peters structured QuantifAI trading systems to be accessible to as many qualifying entities.

To this end, QuantifAI provides crypto investment services in the form of SMAs(Separately Managed Accounts).

The SMA structure allows investors to maintain full custody and ownership of their Bitcoins and all digital assets and employ a service provider to manage their accounts.

As a crypto service provider, QuantifAI gives investors the following benefits for their accounts:

Investors maintain full custody and ownership of their crypto funds at all times.

Transparency – Investors can view Livestream of account trading activity at any time 24/7

Non - intrusive - Most institutional entities can participate.

The conventional process of allocations may be difficult as funds often have allocation restrictions in mandates from their LPs.

An SMA structure allows for most institutional structures to access the QuantifAI system with ease.

Making Bitcoin and crypto transactions accessible is the mantra of the tech giants at the Bitcoin 2021 conference.

QuantifAI now provides the framework for institutional clients and traders to access the QuantifAI proven winning trading strategies.
