

PixelPlex Gives an Update on Its Enterprise Blockchain Development and Consulting Services

PixelPlex is a global blockchain technology solutions provider and has offered more insight into their enterprise blockchain development and consulting services.

New York, New York City, Jun 20, 2021 ([IssueWire.com](https://www.issuewire.com)) - PixelPlex is a global blockchain technology developer with a section of its consulting services focusing on developing blockchain solutions for enterprises. Unlike their regular blockchain development services, [enterprise blockchain](#) solutions aim at creating custom solutions designed to meet precise functional and architectural requirements. This is according to the company's founder and CEO, Mr. Alexei Dulub.

Each custom solution for clients encompasses high-level features to ensure improved data privacy and security, reduced network volatility, optimum performance, enhanced resilience to hacks, parallelization, and seamless and fast flows. Perusing their webpage on blockchain enterprise solutions, it's evident that the solutions offered are comprehensive, functional, and future-proof.

The development team is well versed with blockchain technology and tools that can aid enterprises in becoming more competitive in their business areas. The team builds the enterprise blockchain infrastructures from the ground up, each time to suit a client's specifications. From conducting the Distributed Ledger Technology (DLT) consulting and audit. They diagnose inefficiencies in current processes and design and build custom apps and software to streamline workflow and business processes. They also offer maintenance and system update services.

People can use blockchain enterprise technology in various industries, including healthcare, logistics, gaming, supply chain, and eCommerce. In healthcare, for instance, it can be utilized to encrypt research and patient data, execution of healthcare insurance and storage, and control prescription medicine and equipment. In other industries such as FinTech and DeFi, encryption and irrevocability of data effectively help in the reduction of instances of fraud and data theft. It also eliminates intermediaries, enhances peer-to-peer lending and accessibility to banking through digital banking.

PixelPlex has maintained a record of creating innovative blockchain solutions throughout its existence. The company has clients of all sizes and has a reputation for treating all their projects with equal importance. They have designed and created over 50 enterprise blockchain solutions, and the numbers continue to grow.

About PixelPlex
