To prevent the spread of COVID-19, a method has been employed as EP-ARTION, a technology which dramatically reduces concentration of airborne aerosols contaminants, neutralising viruses and bacteria, and wiping out infectious germs and viruses.

India, Delhi, Jun 2, 2021 ([IssueWire.com](https://www.issuewire.com)) - Technology killing COVID-19 within minutes of use of this ARTION AIR PURIFIER.

The recurrence and mutation of Coronavirus have put us in such a situation where the daily new reported COVID-19 cases have risen to 23 lakhs COVID-19, the largest reported by any country in any seven day period since the start of pandemic leading to pressuring our healthcare system causing shortage of oxygen supply and medicines.

With experts saying, the third wave is also going to soon hit us, preventive measures have taken the spotlight.

To prevent the spread of COVID-19, a method has been employed as EP-ARTION, a technology that dramatically reduces the concentration of airborne aerosols contaminants, neutralising viruses and bacteria, and wiping out infectious germs and viruses including coronavirus up to 99.95%.

Dr. Neeta Doshi, Ph.D. in Application of Ions, the first person in the world to analyse the IONS to electrify the atmosphere to get artificial rain devised the ARTION technology, with the Sanctify Pharmaceuticals, a manufacturer of air purifiers as well, founded by Mr. Mohit Joon, an active philanthropist and an entrepreneur who wanted to bring in one of a kind of technology which helps the world with the pandemic. Along with Mr. Shyam Vasantrao Raut, an IIT Delhi Alumni, in Energy & Environment Management have worked rigorously to help the nation in the pandemic with a vision to provide a more clean environment as well.

Why the ARTION AIR -

It kills all the viruses within a couple of minutes generating imperceptible charges including large particles like dust and smaller particles like bacteria and virus as little as 0.052 -0.140 micrometers which makes the air free from pathogens making the environment non-hazardous.

The claims of Artlon patented have been successfully tested by the CCMB-CSIR virology lab for the deactivation of the COVID-19 virus up to 99.95%.

A typical mesh filter - captures only airborne particles whereas ArtION technology, is one step ahead and also targets gases breaking them down into harmless molecules said, Mr. Shyam

Mr. Mohit Joon also pointed out that it's a lightweight air purifier where even an infected person was to walk in the room, the electrons produced by the purifier will neutralise the potency of virus present while sneezing and coughing as well.

Dr. Neeta Doshi also claims that its ability to destroy microorganisms upon contact including bacteria and viruses continuous and permanently. Unlike UV light and HEPA filter solutions, Artlon technology has been found to be non-toxic and harmless to human beings.

It was also pointed out by Mr. Shyam Vasantrao Raut - the mission is to reduce the lives lost on a daily number and with the third wave that will be hitting children as well, to protect them and give the future generation a safe and toxic-free environment.

Mr. Mohit Joon also claimed that the technology generates similar ions as found in sunlight, thunderstorm, etc which actively cleans the air without producing any harmful by-products, bringing in outdoor freshness indoors.

Artion Air machine deactivates the corona COVID-19, its mutants, other harmful viruses, bringing the atmosphere to safe levels bringing the environment clean and safe.
