

UAE's leading precast manufacturer Abu Dhabi Precast (ADP) selects Epicor ERP cloud to achieve operational efficiency

The importance of inbuilt Industry-specific features in an ERP and the vendor's grip on the Precast industry drives ADP to choose Epicor ERP and Index InfoTech over other considerations.

United Arab Emirates, Abu Zabi, Jun 2, 2021 ([Issuewire.com](https://www.issuewire.com)) - Epicor Software Corporation's award-winning ERP has been selected by Abu Dhabi Precast to address various operational challenges recognizing their precast-specific vertical solution developed by UAE-based [Epicor](#) partner [Index InfoTech](#).

Abu Dhabi Precast, established in 2001 is one of the leading manufacturers of precast and pre-stressed concrete in the U.A.E. Solely owned and operated by ASCORP Holdings, they have grown from a single factory to multiple state-of-the-art manufacturing facilities at Musaffah.

Over the course of ADP's growth, their home-grown solution was not able to cater to the changing business needs and hence requiring ADP to consider a robust, reliable, and scalable ERP of world repute.

Despite the parent group already using another well-known ERP, ADP found it difficult to map their precast-specific scenarios to a generic manufacturing ERP. Mr. Jushak Rehman, Operations Manager at ADP said about their decision, “Epicor being a well-renowned ERP for manufacturing with a global presence and Index Infotech having built a comprehensive verticalized solution on Precast was exciting for us. Index already had experience in implementing the Precast solution for other customers gave us the confidence.” Epicor’s verticalized precast concrete solution had almost all the business scenarios out of the box and needed negligible customization. The solution became even more compelling and attractive due to all features being made available on the cloud, a consideration of great significance from what organizations have learned from the pandemic experience.

Paul Flannery, VP of International Channel Sales at Epicor commented: “It’s great to see Abu Dhabi Precast has selected Epicor ERP for this crucial project. Abu Dhabi Precast is in great hands with a wealth of industry expertise from Index, but also Epicor’s vertical specialisation will enable them to realise the full benefits of an Epicor Cloud solution. I look forward to seeing how the project progresses.” [ADP](#) will go live with 15 users and will expand to 20 after they have implemented

[Epicor ERP](#) is widely recognised as the leading ERP platform in the manufacturing industry, primarily because of its industry-specific functionality and ease of integration and use.
