

Verito Technologies forays into QuickBooks Hosting Services, Accelerating their Cloud Transformation During the Pandemic

Delaware, Wilmington, Jun 18, 2021 ([IssueWire.com](https://www.issuewire.com)) - Verito Technologies, a leading cloud solution provider, enters the QuickBooks hosting market with its immense expertise in offering top-rated cloud hosting services. With this expansion of the list of already-supported applications, the company aims to benefit accounting professionals and firms in leveraging cloud technology for various business needs.

This advancement aligns with the company's mission to eliminate technology-related hassles for tax and accounting professionals. With more than 2,000,000 customers in the mid-market, QuickBooks is the leading accounting software used by diverse businesses. With its cloud-hosted QuickBooks solution, the company empowers small and large companies to enjoy remote accessibility, seamless team collaboration, and many other perks.

Verito has invested in state-of-the-art data centers with Layer 3, 4, and 7 DDOS protection and load balancing features in terms of technology. In addition, their SLA-backed uptime of 99.995%, three-tier security system, and 24/7 cloud monitoring put the company in direct competition with Intuit-authorized commercial hosts that offer QuickBooks hosting services.

Backed by Deft (formerly SCTG), Verito Technologies helps its clients adopt cloud technology and host desktop versions of various business applications on remote servers. The company is a leading cloud service provider facilitating the hosting of tax software, accounting software, and applications like OfficeTools on the cloud.

"The expansion of our cloud services towards QuickBooks is a step in the right direction towards realizing our vision to become the leading cloud service provider," said Jatin Narang, CEO, Verito Technologies. "Combining our existing cloud solutions with QuickBooks hosting, we can fully support our clients from the accounting industry to evolve their business during the pandemic. Like every other industry impacted by the Covid pandemic, the accounting sector has felt the repercussions. In such challenging times, we want to support accounting professionals in adopting the best cloud solutions to sustain and grow their businesses. We are excited about these new beginnings and have planned for the best."
