

Zoe+Ruth's Non-Contact Infrared Digital Thermometers Providing Accurate Fever Alerts for Everyone

United States, Oregon, Jun 10, 2021 ([issuewire.com](http://www.issuewire.com)) - Zoe+Ruth's non-contact, forehead infrared digital thermometer provides an accurate professional medical fever alert system for babies and adults alike. A non-contact thermometer makes a better and easier choice for your family as opposed to traditional pen-styled thermometers that are used in the oral, rectal, and underarm regions for measuring body temperature. Used for a variety of illnesses from the mere cold and flu to the detection

of fever during a COVID-19 crisis, doctors and nurses swear by the convenience of this device.

Zoe+Ruth's thermometers offer professional accuracy with instant reading. The non-intrusive and hygienic forehead thermometer has hospital-grade technology and is pediatrician-approved. Reliable and comfortable for everyone, it gives you highly accurate temperature readings thanks to the Exclusive Zoe+Ruth Advanced Infrared Detection System all displayed on the backlit 4 multi-color screen Fever Alert System. It is specially designed to take human body temperature as well as to take Object Surface Temperatures such as baby formula, bathwater, and food. You can quickly and simply switch between Forehead Mode checking your baby's temperature to Object mode to check that of your baby's bottle prior to feeding. The Thermometer is suitable for all environments like home, work, clinics, schools, hospitals, and daycare. One can easily read the temperature in the dark on the large backlit multi-color LCD with quad colors, blue, green, yellow, red fever system that helps identify the emergence of fever in the child or person's body. This makes for convenient monitoring of fever through the night without waking or disturbing the whole family. Also taking temperatures using the Mute Mode (silent so no beeping sound) ensures you do not wake a sleeping baby or toddler especially when they are unwell.

The speedy 1-second instant-read makes it easier to use it on small kids. The one-touch C & F button makes it quick and easy to switch from the default setting of Fahrenheit to Celsius. Zoe+Ruth has crafted a durable hard plastic case for the thermometer to ensure it is always protected, clean, hygienic, and conveniently packaged in ready-to-use conditions in your medicine cabinet or nursery. The new microchip processor and ultra-sensitive infrared sensor enable you to measure body, room, or object temperature instantly and simply without cross-contamination or spread of infection. The memory capability allows you to recall the last 20 readings taken. The Zoe+Ruth Thermometer has been clinically certified and has been used extensively by hospitals and medical experts. It is the USA and European CE Approved & doctor recommended for your safety and assurance. During times of the global pandemic, this non-touch thermometer should be a necessary item in your medical kit.

Zoe+Ruth has been a trusted brand selling no-contact Infrared thermometers for many years now, long before the COVID pandemic. The company is a home-grown business that prioritizes the well-being of families in its products, services, and vision. They always take the time to carefully research and test what they develop to give the customers comfort and peace of mind. The idea is to create simple, yet innovative and accurate health care products and medical devices that are CE and FDA-approved.
