Antier Solutions Has Integrated Binance Smart Chain Wallet Development Solutions In Its Ecosystem

Antier Solutions is a reliable and reputable blockchain development company offering end-to-end blockchain-based development services including, crypto exchange development, crypto wallet development, P2P exchange development, security token exchange

California, Palm Springs, Jul 16, 2021 (Issuewire.com**)** - After the previous integration with the most popular Ethereum, Tron, and Binance Smart Chain based Defi Wallet development services in our ecosystem, we are glad to announce that Antier Solutions has expanded its services to offer **Binance smart chain bep 20 wallet development** solutions targeting the businesses seeking opportunities to launch their BEP20 based wallets.

Binance Chain Wallet can use to securely store your crypto and exchange your crypto assets.

Whether you want to swap BNB for other tokens, mint NFTs, or do yield farming, you can easily do it all with the browser extension wallet. Currently, the BSC wallet supports browsers like Chrome, Firefox, and Brave.

“ At first glance, the BSC wallet looks similar to other extension-based wallets. However, there are a few features that make Binance Smart Chain wallet unique from the rest. If you already have a Binance account, it will be easy for you to link your wallet with Wallet Direct. This feature restricts you from copying and pasting addresses when transferring digital assets between the two.”, said Vikram R. Singh, the Managing Director of Antier Solutions.

The company offers its wallet development solutions that are packed with all essential wallet functions – from In-chat transactions, enhanced privacy, multi-coin support, QR code scanner, cross-platform compatibility to auto denial of duplicate payments. Start-ups or well-established organizations that wish to set up their BSC-based wallets can leverage this development solution to quickly launch their coveted wallet and offer better highly secure storage places to their customers.

Being well-aware of the fact that catering to mobile users is paramount for today’s businesses, Antier Solutions has made its BEP20 wallet development solution compatible for both Android and iOS platforms – to enable seamless management and spending of fiat and cryptocurrencies even on the move.
