

Benefits Of Using Car Parking Management App And Space Security System

New South Wales, Sydney, Jul 8, 2021 ([Issuewire.com](https://www.issuewire.com)) - It is a hassle and a time-waster for you when all you want to do is to park your car and get on with your life. Moving out and waiting long for a car park can be annoying therefore it is important to have **parking lot management software** for convenient and time-saving parking. There are many advantages to using a **Car Parking Management app** and space security system, and here are just a few:

Why Choose Us

- You will never come home to find that your spot is taken. No matter how late you stay out or how busy the town gets, you will always have a space to park in. During inclement weather, after a long day at work, or simply because you should be permitted to park in your own space, a parking space security system is the only way to make sure that your parking spot will stay open and readily available only to you and your vehicle.
- You will eliminate a lot of time and wasted gas driving in circles to find a parking space. Anyone who has ever lived in a big city or other crowded area knows the frustration of driving in circles just to find one parking space close to his or her destination. This is very frustrating when the parking space was allotted to you but others take advantage of it. A parking space security system can eliminate that problem for you.
- You will feel more secure about being closer to your building. You will no longer have to park your car farther away and have to walk home in the dark or through a bad area of town. You can park closer to your apartment building or workplace without having to worry about where you will have to walk from and how long it will take you to get there. Your car will be nearby and easily accessible should you need it.
- You will never have to get out of your car to remove a parking barrier with [car park management solutions](#). If you live in a very busy part of town, you cannot possibly be able to jump out of your car in traffic just to remove a parking barrier that wasn't designed for reasonable use. The use of orange cones and other deterrents is painful and simply does not work. A parking space security system is operated by remote control, and you never have to get out of your car to remove it.
- Barriers are easily removable and transportable. If you decide to move or need to take your system with you somewhere else, most barriers are easily removable with a few simple tools if you know how to do it. For everyone else, a parking barrier is not very easy to remove and cannot be parked over without damage to their vehicles.

About Us

The Watermelon contactless parking system is an Australian-owned and developed parking system – the **Car Parking Management app** company established by Brett and Garth Mathews. PARKIQ has been responsible for creating innovative and delivering world-first car parking app technologies in the parking industry. Like [parking lot management software](#), car park booking systems, car park credit cards, and parking data reconciliation and reporting systems. The parking technology developed by PARKIQ is used exclusively within the Secure Parking portfolio and is currently used across 100s of

sites worldwide.
