

DriipChain Is what You've Been Expecting

This new blockchain system will be creating a new blockchain consensus mechanism “Proof of Communism” — the world’s first fully 100% community controlled blockchain system — is a whole new thing that is inexplicably wonderful.

Nigeria, Lagos, Jul 2, 2021 ([Issuewire.com](https://www.issuewire.com)) - Likewise the World’s first DriipChain based social media app, “Driipa” is all set to release soon for the world. While still in its development phase, this new messaging system will finally be what the world has been wanting — where privacy is valued and The messaging system which doesn’t favor one side for political purposes. The control of the system will be fully beyond the creators of the app and no messages will ever be deleted by a third party, including the company personnel. Although there will be terms and conditions to guide the community in which Driipa’s AI will monitor, to maintain balance in the community.

Driipa Social Media Web Application is fully based on AI. This Decentralized Application (DAPP) plans to combine the features of major social media apps and integrate them into their public, open-source, decentralized environment that is free from control and interference by any single authority. Driipa has also created a cryptocurrency called DriipCoin designed by Kehinde Victor and Spirit Philip. The purpose of DriipCoin or DRP is to serve as an intermediate mechanism of exchange between two currencies or networks. Since DriipChain acts as a global network in today’s date & counts major banks and financial services amongst its users, Driipa aims to reach every nook and corner where DriipChain has its reach.

“The major problem with conventional internet is that it is constantly under surveillance and is heavily tracked by corporations and social media giants for targeted advertising, not to mention the government

thereby giving off a Big Brother vibe. It's uncomfortable for the populace who just want their data protected. A decentralized ecosystem like DriipChain removes all of those fears. But what is the purpose of Driipa? To serve as a virtual nation built to serve as the strongest backup version of the physical nation. DriipCoin is set to be the most valued cryptocurrency as its wealth value is based not on how much of it you own but how active you are on the network. Driipa is going to redefine being rich. The power goes back to the people with Driipa", said the founder of Driipa.

The blockchain developer's organization has a massive plan to bring upgrades to various conventional projects, such as;

- Fully Decentralized Social media Platform
- World's first hybrid deflatory Exchange
- And more.
