

Gerard Peters digital investment takes off with fintech

The renaissance of alternative investment is here. While conventional wisdom requires determination, patience, sheer guts to be successful in market trading, fintech removes the uncertainty from market trading

New Zealand, Christchurch, Jul 6, 2021 ([Issuewire.com](https://www.issuewire.com)) - Gerard is not laying back! Gerard Peters, visionary CEO of Quantifai Technologies, a certified Microsoft engineer by training has a lifelong fascination and passion for anything digital.

[Gerard Peters](#) is fully acknowledged in banking boardrooms as a leading authority in digital fintech for investments.

Peters started off with conventional banking products in structured finance for property development and acquisition, asset-backed securitization transactions, derivatives, alternative risk structured transfer, capital structuring, financial risk modeling, financial engineering, credit insurance

Peters then took investment structuring to a whole new level. He created fintech AI trading systems, now the institutional investor's dream wishes profits 24/7, 7 days a week, market neutral and risk-free.

Developed with a global team of quant specialists, these fintech systems are deployed in separately Managed Accounts (SMA). SMEs take the risk out of digital investment - investors are protected as they retain total control of their accounts, and Peters fintech systems are deployed into investors' accounts ..and the magic begins.

Clients can keep a close watch live streams of every minute of the trading, many have shared their immense satisfaction as they watch profits continuously generated. Peters has achieved his mission statement to bring ethical trading back into the markets

Gerard Peters and expertly managed cryptocurrency

[Peters fintech systems](#) have been researched backed with more than 10 years of successful FX trades. Now with the resurgence of cryptocurrency, Peters believes that it will provide considerably more lucrative prospects compared to any other existing investment in the market. With the expected continual rise in growth in cryptocurrency fueled by institutional popularity in recent months, Peters has been successful in positioning himself at the forefront of the cryptocurrency trading market.

He is strongly committed to providing leading-edge and targeted managed trading solutions to the institutional market that consistently performs above all the conventional benchmarks.

Gerard has a strong passion for AI and believes channeled use can bring incredible benefits for humanity in many fields. He has boot-strapped research projects using AI and machine learning for:

- Scientific medical research for example in the field of brain research for cerebral palsy
- Using targeted electrical impulses for Alzheimer's research
- Hologram offices, which Covid has made a reality. A solution where schools and offices can effectively operate without international boundaries.
- An 'Amazon' like a marketplace for global investments using algorithm strategies
- A decentralized charity running on blockchain focusing on solving a myriad of global issues including homelessness.
