

iPGARD Launches the First Broadest Range of NIAP 4 Certified Secure KVM Switches

iPGARD Launches the First Broadest Range of NIAP 4 Certified Secure KVM Switches to be Designed, Made, Tested, and Approved in the USA.

Nevada, North Las Vegas, Jul 23, 2021 ([IssueWire.com](https://www.issuewire.com)) - Las Vegas, NV: Today, iPGARD inc., a security focused manufacturing and cyber-security development company, announced that they have launched the broadest range of NIAP 4 Certified Secure KVM switches designed, made, tested, and approved in the USA.

For the first time ever, a US company has been tested and certified as a manufacturer of Common Criteria Profile Protection NIAP 4.0. By achieving this, iPGARD has set the new standard for secure design and manufacturing in America.

iPGARD's NIAP 4 offering comes with the widest secure product line in the market. This includes CAC variants of multi-viewers, KM, and secure isolators. As well as both CAC, and non-CAC variants of DVI, HDMI, and DisplayPort KVM, along with the brand-new HDMI/DisplayPort combo units like the HDN series.

All switches have been tested and certified, meeting the strict requirements of the National Information Assurance Partnership (NIAP) 4, the highest Common Criteria Level of protection. This protection isolates each computer, allowing the use of devices with varying levels of security in the same environment. This is done while ensuring complete protection against accidental transfer of classified information, unauthorized access, and data leaks. This protection makes them an invaluable resource for military and defense applications.
