

New Autonomous Yield And Liquidity Generation Protocols Burn King Protocol Offers Huge Profit To Holders

California, Los Angeles, Jul 1, 2021 ([IssueWire.com](https://www.issuewire.com)) - In the last few years, cryptocurrencies have become prominent all over the world. More and more investors are becoming interested in digital currencies and blockchain technology. In the industry of autonomous yield and liquidity generation protocols, one of the newcomers, Burn King Protocol (BKP) has made a substantial amount of impact. The service works very efficiently. Whenever someone purchases or sells BKP tokens, the total supply

goes down. The service then rewards the holders. On every transaction made, the company assesses 10% tax on it.

It is highly profitable for holders to use the excellent services provided by Burn King Protocol. After every transaction is made, all wallet holders on the chain will immediately get token rewards from a 1% redistribution. The actual burn wallet gets the reward of 3% on each transaction. It then affects the supply and it goes down. It has a positive impact on the floor price, increasing its value. Apart from these exceptional offers, the company also offers a 6% liquidity tax on each transaction. It is then locked on PancakeSwap automatically.

The liquidity is locked for 2 years, till 2023. The supply at Burn King Protocol reduces regularly. In order to make a purchase, the users need to download MetaMask or TrustWallet. Then they have to set up their wallet and go to PancakeSwap. Next, they have to click on the connect button and copy and paste the BKP Token address. At last, they must enter their desired amount and click swap. Everything is beautifully described on their website so that the users find it convenient to use.

Burn King Protocol is an autonomous yield and liquidity generation protocol that came into existence on 19th June 2021. In a short time, the service has established an effective network of holders. Its trustworthy services have earned it vast recognition and popularity in the market. Holders get rewarded after every transaction and it is quite profitable. To know about their services in detail, make sure to visit them at <https://www.BurnKingProtocol.com>.
