

# Self-Cleaning Technology Every Cruise Line Needs

Set Sail With Peace of Mind

**Florida, Miami, Aug 27, 2021 ([Issuewire.com](http://Issuewire.com))** - SafeHandles™ manufactured an easier way to keep common touchpoints on cruise ships clean 24/7 with no upkeep. This antimicrobial company manufactured a clear adhesive that kills germs instantly and continuously, by simply taping it onto surfaces.

For example, elevator buttons, door handles, stairwell banisters, room key cards, buffet areas, fitness

centers, recreation areas, children's activity rooms, theaters, the casino, tender boats, and many additional places stay clean with it installed on cruise ships.

Self-Cleaning Pens with antimicrobial tape kill germs instantly and continuously no matter how many guests or staff touch them. These are great to put at customer service, guest staterooms, onboard stores, and with the hospitality staff for signatures requested when interacting with guests.

PURE® Hard Surface, recently voted by USA Today as a top product, is chemical-free, non-toxic, and kills 99.99% of bacteria and viruses, including the Human Coronavirus. This is great to spray around the ship, even as cruisers are onboard. It adapts to all lifestyles since there are no harmful chemicals intact. Imagine doing a quick spray on tender boats as guests are transported back and forth from islands.

About SafeHandles:

- Used in all 50 USA states, Canada, Malaysia, Europe, and Australia with contracts in other countries pending
- Easily installed within seconds
- Begins working 24/7 to inhibit the growth of certain microbes
- The custom-fit protective tape creates a durable film in high traffic touchpoints providing a clean surface
- Eliminates the need for employees to spray and wipe certain surfaces
- Patented, EPA registered technology
- Approved to purchase with Government Care Act funds
