

Adam Adler Explains Why More Companies Are Outsourcing Their Cybersecurity Needs

Adam Adler, serial entrepreneur discusses the benefits of outsourcing cybersecurity needs

Florida, Miami, Aug 13, 2021 (IssueWire.com) - [Adam Adler, the owner of The Adler Fund](#), invests in a wide array of businesses. Some of the business types that he owns include property rentals and cybersecurity companies. If you own a business, cybersecurity is extremely important. When it comes to cybersecurity, you have two primary options. You can either hire employees for your company's security or you can outsource your cybersecurity needs. There are a number of benefits associated with outsourcing. Learn more about these benefits to determine if it is ideal for you.

Adam Adler Says Outsourcing Provides 24/7 Protection

[Adam Adler](#) details that one of the benefits associated with outsourcing your cybersecurity needs is that when you outsource, you have access to staff members 24 hours a day, seven days a week. When you have an employee, that employee is only around 40 hours a week. Problems do not only arise when an employee is on the clock. You need someone to help you if problems happen outside of normal business hours, and outsourcing helps to ensure you have help around the clock.

Adam Adler Explains That Outsourcing Provides More Minds and Knowledge

Adam Adler says that another major benefit associated with outsourcing your cybersecurity needs is that outsourcing provides you with access to not just one cybersecurity specialist, but a whole team of them. Everyone has their own individual strengths and weaknesses. If one person is struggling to fix something related to your cybersecurity needs, another staff member can help them or take over. When you hire an employee, you only have their insight and only have their strengths and weaknesses. When you outsource, you have a whole team who can help you and help to come up with ideas for your cybersecurity needs.

Adam Adler Details How Outsourcing May Be Cheaper Than Hiring an Employee

[Adam Adler](#) explains that the final benefit associated with outsourcing your cybersecurity needs is that outsourcing is typically cheaper than hiring a full-time employee. When you hire a full-time employee, you not only have to pay them a salary, but you have to provide them with benefits. You also need to supply them with a computer and workspace. Adding an employee to your staff can add up quickly. When you outsource, you only pay for the time the outsourced staff member is doing work for your company, and since time is split among many companies, it typically winds up being cheaper.

[Adam Adler](#), the owner of The Adler Fund, which currently owns a cybersecurity company, knows the importance of cybersecurity. If your business is in need of cybersecurity services, outsourcing is likely a better choice for you. Outsourcing your cybersecurity needs helps to provide 24/7 protection, ensures you have multiple solutions available, and is often cheaper than hiring an employee.
