

Antier Solutions' Ecosystem Now Includes Dapp Development on BSC Network

Punjab, Mohali, Aug 28, 2021 ([IssueWire.com](https://www.issuewire.com)) - Following our previous integration with the most popular Ethereum, Tron, and Binance Smart Chain based Defi Wallet app development services in our ecosystem, we are pleased to announce that Antier Solutions has expanded its services to include [Dapp Development on BSC](#) for businesses looking to user-friendly decentralize application in Binance Smart Chain Network.

Decentralized apps can be constructed on a variety of blockchain networks, which can be used by DeFi initiatives. As a result, one of the most important decisions a DeFi project must make is choosing a reliable blockchain protocol that provides a dependable, affordable, fast, and user-friendly platform for DApps.

Since its launch in September 2020, Binance Smart Chain (BSC) has established itself as one of the most important blockchains for decentralized finance and DApp development.

“ It achieves faster transaction processing rates and confirmation times when combined with smart contracts for decentralized app development while also being very flexible.”, said Vikram R. Singh, the Managing Director of Antier Solutions.

Features of our BSC Based Dapp

- **Low Transaction Fees:** Transaction fees and blockchain fees are terminologies used in the blockchain realm to represent the costs that users suffer when they conduct a transaction. This fee is paid to block miners and validators in exchange for confirming that a transaction has been executed and recorded on the blockchain.

Most DeFi apps have a lot of transactions, and they all cost money. As a result, a blockchain with significantly lower fees for a DeFi protocol or dApp is critical.

Binance Smart Chain and Ethereum are the two most often utilized blockchains for DeFi initiatives. However, BSC is substantially less expensive than Ethereum when it comes to the cost of a blockchain.

- **Increased Liquidity and Versatility:** Similar to Ethereum's ERC-20 token standard, Binance Chain provides a platform for producing and showing tokens based on its own BEP-2 token standard. Users of the coin will have access to more liquidity and a wider range of uses thanks to Binance's status as a global exchange powerhouse.

Binance Chain employs its own native BNB token to give prizes and discounts in exchange for participating in the network, in addition to paying transaction fees. BNB can be used to buy, send, and receive Binance coins (BNB), issue and display tokens based on BEP-2, freeze, unfreeze, burn, and mint tokens on the Binance Chain. Aside from that, individuals can create their own tokens.

About Antier Solutions

Antier Solutions is a reliable and reputable blockchain development company offering end-to-end blockchain-based development services including, crypto exchange development, crypto wallet

development, P2P exchange development, security token exchange development, NFT wallet development, NFT token development, NFT marketplace development, P2P lending platform development, coin, and token development, smart contract development, ICO, IDO, and IEO development and marketing, crypto-friendly bank development, Derivatives exchange development, margin trading exchange development, and Binance Smart Chain token and dapp development.

The company was enlisted by GoodFirms and Clutch as among the top 25 Smart Contract development companies in the world very recently.
