CORAL REEF DEVELOPMENT GROUP ACQUIRES A1 SOLAR SOLUTION

The development company has bought out A1 Solar Solution, now Coral Reef Energy Systems, and looks to expand its reach internationally.

[Long Beach, CA August 3, 2021] — A1 solar solution, a company that is geared towards bringing sustainable energy and environmental consciousness in the west coast of the United States, was noticed by Coral Reef Development Group LLC (CRDG) after A1 made substantial partnerships with prominent companies — positioning themselves to be a pioneer in clean energy for the next generations.

The CEO and President of CRDG, Romulo R. De León, and his management team quickly realized the potential of the startup company and instantly sought out a buyout and expansion of the company. Romulo was interviewed, and stated, “I am extremely excited to see the integration of these two great companies. We have already begun preparations to begin our journey to lead the way for clean energy and zero emissions by 2050.

Leading the charge along with Romulo, are Rome De León — Director Global Environmental Operations — and Chris Lockwood — Director of International Finance and Economic Development. They have also announced that the name of the CRDG solar branch will be Coral Reef Energy Systems, specializing in residential, commercial, and solar farms internationally.

Coral Reef Development Group LLC (“CRDG”) is a Long Beach, California-based Development Corporation established to bring innovative technology and clean energy to consumers and international development projects.
