

COVID-19 Vaccine Booking Website, Get Your Jab offers an Integrated Platform for Consumers and Providers

BOOK YOUR VACCINE HERE. Australian Company Launches Vaccine Booking System and Directory connecting communities with their local vaccine providers

Australia, New South Wales, Aug 19, 2021 ([Issuewire.com](https://www.issuewire.com)) - Vaccination provider and Australian COVID-19 vaccine booking system and directory, [Get Your Jab](#) is now live for consumers and providers to collectively take one step further in the global fight against the pandemic. Australian software and web development company, [Pi r2 \(πr2\)](#) has developed a COVID-19 vaccine booking system and directory to connect consumers with local vaccine providers without the wait times.

[Get Your Jab](#) enables consumers to quickly and safely attend their vaccine appointment without unnecessary delays and community exposure. The system provides a convenient and easy booking process and also allows you to complete the Medicare consent form that one would otherwise be completed at a pharmacy or a doctor's surgery filled with other patients, i.e. a space promoting community spread of the virus. This website changes the game altogether with a focus on minimal community exposure and allowing consumers to complete forms from safety of their homes. On the flip side local providers who have struggled to cover their costs for administering the vaccine as a result of

the excessive admin requirements are now realising a return for their efforts. Early adopters have praised the booking site for its ease of use and reduction in the cumbersome administrative work surrounding COVID-19 vaccine reporting.

Consumers can simply visit the Get Your Jab website and book their COVID-19 vaccine. To book consumers are prompted to “Allow Location” or manually enter their postcode to view their local vaccine providers. The provider listing shows availability as well as the COVID-19 vaccine brand each provider has on hand. Consumers are then able to book their first and second dose and receive SMS reminders to book a booster dose.

The website connects consumers and local providers, and eliminates unnecessary paperwork and wait times, thus paving the way for a safe yet convenient COVID-19 vaccination process. Over 5000 vaccine providers across Australia have been added to the system. Providers will automatically start receiving tentative bookings from local consumers. It is therefore important for providers to activate their listings in order to set their availabilities and manage bookings. The system also attracts local consumers and provides and offers a strong and effective platform for local vaccine providers to notify their community of their availability and the vaccines they have on hand. Providers working with Pi r2’s [marketing](#) team and using Get Your Jab’s booking system have been receiving 40 - 50 bookings per day.

Providers can activate their vaccine booking system in just one minute then proceed to make necessary updates and custom set ups.

Upon activating the booking system, providers will receive login details to update their listing online including contact details and vaccines they administer. Providers receive complete support with their bookings and advertising including a ‘dedicated booking link’ and graphics to add to their website and social media campaigns. Pi r2’s designers will also create a Branded Poster with the providers dedicated booking QR code. Listings that are activated will turn green on the website’s map and local consumers will be encouraged to book their vaccines with the respective provider. Providers can also take bookings over the phone or in-store, as well as entering booking details on behalf of their existing customers.

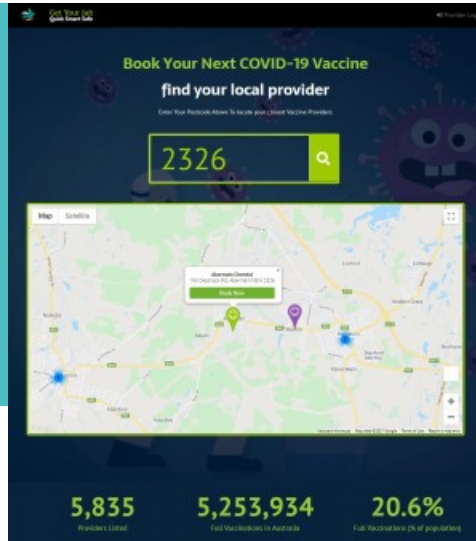

Get Your Jab’s vaccine booking system is feature rich allowing providers to view confirmed bookings, cancel or reschedule, set permanent availability as well as temporary block out times, set the number of vaccines they can administer per 15 minutes, allow household members to book together, view or print per filled digital Medicare consent forms, and confirm whether the consumer attended their appointment. This simplifies the AIR Reporting process as all information is readily available in digital format.

Get Your Jab is also set up to add flu vaccines and any other appointment types that providers wish to add on.

For consumers, on the other hand, the convenient and user-friendly website offers an easy 2-step booking process, with multi-dose bookings, SMS and email reminders and confirmations, auto-reminders for the second dose and booster dose, congratulatory emails to customers, ability to add multiple household members within the same booking, choice in vaccine brands.

Get Your Jab is a COVID-19 vaccine booking platform that has allows the whole of Australia to take a lead in the global plight against COVID-19. Vaccination is currently the best way to combat and minimise the effect of the virus in our bodies and the Australian government is providing a platform that integrates consumers and provides within a safety shield. The company is continually working on system updates including AIR reporting and Google review integrations to further support local vaccine

providers active on the system. For any further information, visit their website at getyourjab.com.au.
