

SchoolCues Helps Bring Children Back To School During COVID With a Screening Mobile App

California, Irvine, Aug 31, 2021 ([Issuewire.com](https://www.issuewire.com)) - SchoolCues (www.schoolcues.com), a premier school management system specifically catered towards small schools, recently released their COVID screening app to help students go back safely to classes. The beta version of the app was released last year with the emergence of the pandemic, and based on positive feedback from users, the final version of the app is due for release at the end of August.

The SchoolCues' [COVID screening app](#) allows small schools to effectively screen students in seconds before they enter school buildings. This is a game-changer for those schools that have been struggling with COVID guidelines and COVID compliance. The current practices involve excessive use of paper to manually screen students, which is not only time-consuming but hinders timely COVID compliance.

Ever since the release of the beta version, SchoolCues has documented approximately half a million COVID form submissions and screened a total of 5000+ students. In the past month especially, SchoolCues has seen an overgrowing demand for schools to be able to use the screening app as soon as possible for the new school year, to ensure that there will not be any disruptions with students' learning. Schools want to make sure that children can continue to learn inside the classroom, as opposed to their homes, where there may be many distractions.

The development and release of the COVID screening for schools app would not have been possible without the help of Sunvera Software, an Irvine-based software development company, specializing in secure application development, cloud solutions, and custom software development.

"SchoolCues came to us with an interesting idea, and our team's expertise in building screening apps mixed with our excitement to be able to contribute to this project to make life easier for school administrators allowed for a smooth delivery of the project right in time," claimed Sanga R., Chief of Customer Success at Sunvera Software.

The COVID (bring children to school during COVID) app (<https://www.schoolcues.com/electronic-covid-19-screening.html>) has been released for both iPhone and Android. SchoolCues has plans to work with Sunvera Software to be able to release their upcoming modules including Donations and Fundraising, Alumni Management, and Financial Management modules.

SchoolCues is an all-in-one school management software system catered towards small schools including Montessori, Christian, Waldorf, Lutheran, Charter, and Independent schools. Since 2010, SchoolCues has delivered effective school management solutions including parent engagement and communications to thousands of small schools in the United States and Canada. More information on the company can be found at www.schoolcues.com.

Sunvera Software is a local software development solutions provider headquartered in Irvine, CA. Formed in 2013, Sunvera provides custom software development with security-focused mobile and web app development, cloud migration, database solutions, and more. More information on the company can
