

Self-Cleaning Technology Every Air Line and Airport Needs

California, Eureka, Aug 31, 2021 ([Issuewire.com](https://www.issuewire.com)) - SafeHandles™ has an easier way to keep common touchpoints on airplanes and in airports clean 24/7 with no upkeep. This antimicrobial company manufactures an EPA-registered, clear adhesive that protects surfaces instantly and continuously, by simply taping it onto surfaces.

In an airport, elevator buttons, check-in desks, door handles, escalator rails, food court areas, restroom appliances, TSA buckets, and many high traffic areas are a breeding ground for germs. SafeHandles™ adhesives would keep surfaces clean instantly 24/7 for six continuous months.

The same technology could yield the same results installed on airplanes in places such as the seat armrests, buttons above the seats, beverage carts, and several common touchpoints within the onboard restrooms.

SafeHandles™ also has Self-Cleaning Pens with antimicrobial tape. These are great to put at customer service desks, stores, and with the airline staff for signatures requested when interacting with guests. PURE® Hard Surface, recently voted by *USA Today* as a top product, is chemical-free, non-toxic, and kills 99.99% of bacteria and viruses, including the Human Coronavirus. This is great to spray around the airport and airplane, even with travelers around. It adapts to all lifestyles since there are no harmful chemicals intact. Imagine doing a quick spray in between flights killing 99.99% of bacteria and viruses, as well as letting travelers know that these EPA-registered, self-cleaning products are keeping their space clean 24/7. **Your airline or airport would be the first choice for many knowing these measures are in place.**

About SafeHandles:

- Used in all 50 USA states, Canada, Malaysia, Europe, Bahrain, and Australia with contracts in other countries pending

- Easily installed within seconds
- Begins working 24/7 to inhibit the growth of certain microbes
- The custom-fit protective tape creates a durable film in high traffic touchpoints providing a clean surface
- Patented, EPA registered technology
- Approved to purchase with Government Care Act funds
