

AppStudio Develops the 'Skills Ontario' Mobile App - A User-Friendly, Bilingual and Accessible Native App

This mobile application will be a part of the company's extended portfolio and an example of its technological prowess in the app development industry.

Ontario, Toronto, Sep 28, 2021 ([Issuewire.com](https://www.issuewire.com)) - AppStudio, Canada's leading mobile app development company, has developed a comprehensive native mobile app for Skills Ontario, a not-for-profit organization working for developing the employability skills of Ontario youth. The purpose of the mobile app is to help students identify their dream career based on their interests and provide them with the correct information to find success in the future.

The application is developed using native languages for iOS and Android platforms. The layout is designed while keeping the user flow in mind. And, the app is packed with useful features, like career quiz, directory of skilled trades, career profiles, events calendar, and career game/simulation, to work as a career guidance tool for Ontario's youth population and their influencers, like parents, teachers, and guidance counsellors.

The Canada-based technology giant kept the UI stable and interactive while ensuring that the app

complied with Web Content Accessibility Guidelines (WCAG) 2.0 AA and was compatible with mobile devices (Android and iOS), tablets (Android and iOS), and responsive web browsers.

“We are happy to be a part of a project that aims to bridge the gap between education and the skilled trades workplace. Being a reliable name for iOS and [Android app development](#), we have made a mark in the industry for our exceptional native apps which helped us in delivering a tailor-made, bilingual and easy-to-use mobile app for Android and iOS,” said AppStudio’s spokesperson.

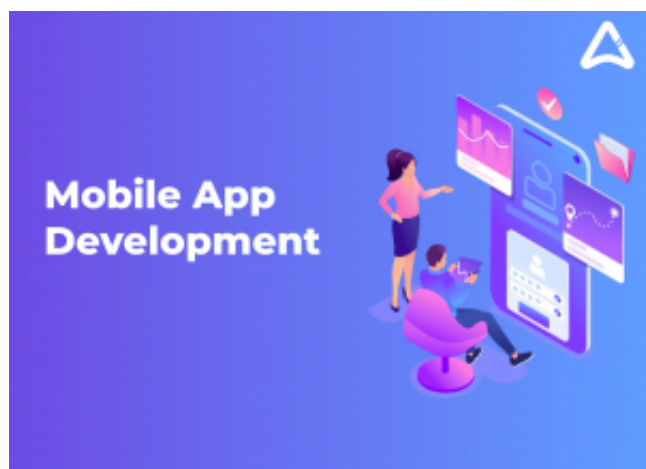

He added, “We worked through many underlying engineering issues to improve the bilingual capabilities in Skills Ontario mobile app. We built the UI and text in both English and French to target the diverse population of the Ontario province. Also, we implemented GDPR security and privacy features to keep data security threats at bay.”

Implementation of quizzes and directory was a breeze but seamlessly embedding Origin/Immersive Link 30-Degree videos in the mobile app was a challenge that AppStudio overcame with continued improvements and testing. Since the [app development company](#) is known for meeting deadlines, they submitted the design and architecture on time, and the software building phase was completed quickly.

AppStudio has developed many native applications in the past, and this mobile app is another example of this Toronto-based company’s experience, domain expertise, and technical know-how. The company focuses on achieving many more milestones in the future with its agile development approach, dedication, and hard work.

About the Company
