

## Doge Protocol Announces the Launch of its Token (DOGEP) on Ethereum Blockchain.

Doge Protocol - A community-driven blockchain project, launched its Ethereum based token (DOGEP) on Sep. 1, 2021, on the decentralized exchanges Uniswap and Sushiswap.

**Harju, Tallinn, Sep 7, 2021 ([IssueWire.com](https://www.issuewire.com))** - In the true spirit of fair launch, all the 100 trillion tokens were available for public and community purchase, with no separate allocation for the founders or to the development team.

Additionally, to ensure that the tokens are fairly distributed to the public and the community, a 'smart contract enforced maximum limit of 0.99% of the total token supply per wallet', has been set during the fair distribution period.

This maximum limit of 0.99% of the total token supply per wallet, will be in place till the end of the fair distribution period on Saturday, April 30, 2022, 11:59:59 PM GMT.

One of the important aspects of the [Doge Protocol](#) is a Quantum Resistant Blockchain of which the Doge Protocol community will get approximately 15% of overall coins. Another use case for the [DOGEP](#) tokens is for decentralized apps (DAPP). The white paper detailing the roadmap for Doge Protocol will be released this month.

A key use case for the tokens is on the decentralized game contests platform, for which work is already in progress. This platform will enable the game players to participate in multiple contests of their choosing from game developers and publishers, who seek to market their games to the wider gaming community.

Following up on its full-scale launch, the team published the [smart contract codebase on Etherscan](#) and locked the initial liquidity in Unicrypt till the year 2050, to showcase their long-term commitment to developing and promoting Doge Protocol.
