

Fonn Construction Recognized in Construction Executive's List of The Top Construction Technology Firms™

Colorado, Denver, Sep 28, 2021 ([Issuewire.com](https://www.issuewire.com)) - Fonn, a software company focused on delivering project management software for the construction industry, is pleased to be recognized among other construction technology nominees in *Construction Executive's* inaugural list of [The Top Construction Technology Firms™](#).

Now in its 19th year of publication, *Construction Executive* is the leading trade magazine about the business of construction. In its September 2021 issue, CE published a comprehensive list of The Top Construction Technology Firms™ featuring an analysis accompanied by an article in which leading technology experts discuss their construction clients' most pressing business concerns. CE developed The Top Construction Technology Firms™ list by asking hundreds of firms that provide technology and software solutions for the construction industry to complete a nomination form. The information collected included: 1) the firm's product offerings specific to the AEC Industry; 2) the user profile for each product (type and size of the firm for which the product is recommended); 3) how each product is sold (by seat, user, license, project, etc.); and 4) the number of active users within the past twelve months (by individual users and/or companies). There was no fee to participate and not every firm that completed the nomination form made this curated list. After carefully scrutinizing the data collected, CE developed its 2021 Top Construction Technology Firms list.

Fonn is a cloud-based project management solution for construction that increases productivity through streamlined collaboration—enabling builders and workers to store pertinent documents, communicate on-site in real-time, and monitor projects off-site in a single platform. “We are constantly innovating. Over the past 4 years, we’ve been developing our technology, our people, and our culture. While historically, the construction industry has been slow to adopt technology to support its projects and tradespeople, we’re seeing a shift in the mindset of the industry,” said Jan Tore Grindheim, Fonn’s CEO and Founder. “We want to be part of a revolution—one that takes construction from an industry that has been a challenge to evolve to one that’s leading the way in efficiency. Change seekers recognize the value our platform can bring to construction projects of all sizes. We’re honored to be included in this list

of construction companies striving to transform the construction industry through digitization.”

About Fonn

Fonn is a unified construction management software solution that increases productivity through streamlined collaboration. A web application in the office, and a mobile app on-site, Fonn is ideal for construction projects of all sizes. Builders and workers can store pertinent documents, communicate in real-time, and monitor projects off-site in a single platform. Fonn simplifies communication so contributors stay informed and stay ahead of costly errors. Projects are done on time, on budget—creating efficiency and saving money. With operations in the US, UK, and Norway, Fonn has enabled its customers to deliver construction project excellence worldwide.
