

Introducing Motadata ServiceOps Patch Manager

Motadata Announces a New Addition to their Services and Solutions

Gujarat, Ahmedabad, Sep 3, 2021 ([Issuewire.com](https://www.issuewire.com)) - Mindarray Systems Pvt. Ltd. (Motadata) today announced their new offering ServiceOps Patch Manager, a patch management solution, as part of ServiceOps version 7.4 to defeat the challenges organizations face while managing and protecting their IT infrastructure.

To help organizations manage numerous patches, ServiceOps Patch Manager is designed to automate every stage of the patch management process – from discovery to deployment. This solution comes with inbuilt patch management features like **automated discovery and patch scanning, automated patch deployment, patch testing and approval, automated package deployment, automated registry deployment, customizable deployment policies, compliance reporting, and patch governance dashboard.**

The patch management software is capable of handling tens of thousands of workstations and servers. The newly launched Patch Management can minimize the time network admin needed to allocate patch updates, fixes, and remediation activities and the impact it will have on users.

ServiceOps Patch Manager also supports end-to-end life-cycle management of various categories of Windows patches like Security Updates, Non-Security Updates, Antivirus Definition Updates, Roll-ups, Service Pack, and Feature Pack updates for both client and server OS.

With ServiceOps Patch Manager, Motadata aims to help businesses:

- Mitigate associated security risks.
- Cover endpoints across locations & subnets.
- Deploy agents through active directory, GPO, scripts.
- Create approval automation.
- Achieve patch governance.
- Gain better compliance management.

- Save bandwidth by reducing up to 90% through batch transfer.

How to Get Started?

Motadata with its new approach will enable the impact of all the business-specific needs suitable for IT service management, IT infrastructure, network, and applications.
