

NFTCalendar.wiki updated with new customer friendly design

NFTCalendar.wiki new website list all upcoming and active NTF drops

United Kingdom, London, Sep 14, 2021 ([IssueWire.com](https://www.issuewire.com)) - [NFTCalendar.wiki](https://nftcalendar.wiki) launches new website design.

Following user feedback, the website has gone through a redesign making it quick and easy to see when NFT token drops are happening.

NFT Drops or NFT token drops are when entire collections of NFT art go on sale for the first time. Many of these have been in development for months and teams of software engineers and graphic designers have worked to build a collection of art.

Some collections have over 10,000 items all unique and generated using computer programs, an image is split into several layers called traits, then a piece of software merges said image trait layers into a unique image, in random order. The aid of the software ensures that no two images are alike so these collections really are unique images.

Once the image is embedded into the NFT token the token gives the owner of the token copyrights over that image.

[NFTCalendar.wiki](https://nftcalendar.wiki) helps NFT investors find the next NFT drop so they can purchase an NFT token at the launch price. Many NFT tokens will later appear on OpenSea an eBay style auction site where NFT investors can list their inventory for sale to the highest bidder or fixes the price.

Getting in early can help investors reap big rewards should a collection become popular among the NFT marketplace.

NFT Calendar made their site easy, quick to use. In a few minutes, you can see what's active right now and what is launching today or later in the week.
