

Spine Pluss Announces Launch of Its Online Store and First Product “Night Posture Pluss TM”

The product is designed in such a way that it helps in relieving strain from various muscles that support the spinal cord.

California, San Jose, Sep 28, 2021 (Issuewire.com) - A New brand SpinePluss.com is launching on September 30th, specialized in Spine and posture correction products. The first product they are launching is “Night Posture Pluss™” which is helpful for correcting the body posture and spinal alignment while you enjoy the sound sleep. The product keeps the spine aligned and maintains the balance of the body. Using this pillow, one gets complete relief from spine, leg, hip, back, and thighs pain, offering comfortable sleep after a hectic day.

The product is designed in such a way that it helps in relieving strain from various muscles that support the spinal cord. There are many reasons that cause the pressure to build up, including poor body posture, sitting or lying in one posture for long hours, or any injury.

The first product “Night Posture Plus TM” is going to be available on the Spinepluss.com website on

September 30th. Made of memory foam, “Night Posture Plus™” perfectly fits the natural curves of a person’s legs. The pillow is very beneficial in aligning the spine and easing excess pressure. The majority of people consider a pillow to be used under the head only, but it can be utilized in several ways to help them get the rest and comfort they need. This product will be an excellent thing a person could buy to have undisturbed sleep and instant relief from spinal pain or uncomfortable sleep.

Night Posture Plus™ is designed in such a way that it offers a plethora of benefits to its users. It includes:

a) Increased Blood Flow:

When a person sleeps on one side, that side of the body exerts high pressure on the opposite side of the body. Therefore, the entire body weight is pushed down on the leg and hip, squeezing the blood vessels on that side. It can cause pain in limbs, tingling sensation, or erectile dysfunction if blood circulation gets reduced. Keeping a “Night Posture Plus™” between the knees can help the person in releasing pressure along with increasing blood circulation.

b) Relief From Knee and Back Pain:

Placing a “Night Posture Plus™” under the back or knees while sleeping on the back also helps in relieving strain on the spine. This spinal position is extremely important for sound sleep and avoiding pains and aches that a person might feel when he or she wakes up from sleep. The most common symptoms of back or knee ache can be sciatica or ache that shoots down to the leg, laterally the path of the sciatica nerve.

c) Helps in Keeping Spine Aligned While Sleeping on One Side:

An individual sleeping on one side might have experienced the sensation because of knees rubbing against each other the entire night. “Night Posture Plus™” provides extra comfort and support when positioned amid the knees. Herniated discs and disc degeneration have become a very common problem among old people. Night Posture Plus™ will give restful sleep in these health conditions and offer fast recovery by correcting spinal alignment.

Spine Pluss’s top-quality spine alignment product is an excellent solution for pregnant women who find it difficult to sleep either on their sides or back. The high density, durable material provides long-lasting comfort to expecting mothers, thus enabling them to enjoy their sleep. The ergonomic design of the product supports the legs and body’s overall posture perfectly. This pillow provides many benefits to pregnant women as well. Some of these comprise:

- Boosting energy
- Sciatica pain relief
- Healthy sleep
- Relieves stress, leg pain, and back pain
- Correct spinal alignment

- Improved blood circulation
