

Tucson Alternator Has A Large Selection Of High Amp Pure Power Alternators

Arizona, Tucson, Sep 24, 2021 ([IssueWire.com](https://www.issuewire.com)) - Tucson Alternator Exchange (<https://www.tucsonalternator.com>) is your one-stop-shop for high-powered alternators which dramatically increase the vehicle charging rate thus improving the performance of your electrical system.

Having a quality reliable high-output alternator will not only improve your electrical system performance at low idle and normal operating speeds but help your battery recover 50% faster which improves the life of your battery.

You're in good hands with Tucson Alternator Exchange's large selection of High Amp Pure Power alternators for Car Audio, Marine, Off-Road, Overland, Racing, Fleets, and EMS applications.

Tucson Alternator Exchange (TAE) and Copperstate Auto Electric (CAE) have been in business since 1979 helping customers locally in Arizona and Nation Wide with all their vehicles charging and starting needs. They are locally owned and a second-generation business.

With over 40 years in the business, TAE can test, advise, and give a free estimate before they repair, rebuild, or sell you a new part from their vast inventory to help you with your car. From trucks, motorcycles, ATVs, golf carts, and other vehicles, they can help you power machines for your personal and professional needs.

TAE take's pride in adding value to its customers' lives each step of the way. They even go as far as having quality control to the point where they remanufacture starters and alternators from original equipment cores. They take the time to build quality products with fewer chances of defects.

Not to mention, TAE believes in personalized service. They love when customers call for assistance or ask questions. They have field representatives that'll help you through the process of a sale or any technical knowledge you may need.

Each starter they manufacturer they test through their state-of-the-art computerized tester, which includes 16-point inspecting throughout the entire RPM specification range. From a voltage drop, maximum current, speed, maximum torque, and other torque constants, they make sure to test the functionality of their starters.

They also test different components and sub-assemblies of their alternators. TAE will clean, inspect, test, and replace them to add service parts where they're needed. Also, it gives them a chance to make sure the stator, rotor, regulator, bearings, and other elements work.

TAE value's your time and money and makes sure you get what you need from us the first go around.

TAE/CAE is dedicated to outstanding service. They want to provide the best quality to our customers and save them money when purchasing their next alternator, starter, battery, or parts.
