Telangana, Hyderabad, Oct 26, 2021 (Issuewire.com) - After five years of successful classroom and [online training in Bangalore](#), recently we started [big data training institute in Hyderabad](#).

Training's main intention familiarises production environment. This means without depending on others independently implement one end-to-end project. Students must get that level of knowledge in the institute, but most of the students do not learn up to that level for many reasons.

We are the best big data training provider, for the last five years many students got job opportunities. In this big data training, what are the technologies required to implement one end-to-end big data training? everything was explained in this training.

This training is best suitable for both freshers and experienced professionals. For better convenience, we provide both online and [classroom spark training in Hyderabad](#).

These technologies covered in this training:

Hadoop
Hive
Sqoop
AWS,
Kafka
Spark,
Cassandra,
Flink,
Nifi,
oozie,

Snowflake
Airflow
every Monday ill starts a new batch.
