

New products launched by USA Startups testing company Stelo Technology puts random apps up to scrutiny

The weekly Defect Crawl project started by Stelo Technology identifies atypical errors in randomly chosen applications.

Push world-class Web & mobile apps faster into the market without compromising on Quality.

Build and deploy world-class Web & mobile apps for your organizations at scale and leave your Software System Quality us. We ensure fast software delivery with high-quality software services on time, budget & Quality every time. We service a variety of clients ranging from startups to Fortune companies.

- ✓ Choosing Us Will Save You 60% In Cost
- ✓ 7 Days Risk Free Guaranteed

Maharashtra, Pune, Oct 11, 2021 ([Issuewire.com](https://www.issuewire.com)) - Software testing is a crucial element of the product development cycle, finding and eliminating various errors in the early stages. Addressing these issues early on not only saves time but saves the developers from receiving negative feedback and bad attitude from the end-users.

Most companies pick out one or two well-known testing methods and run through them near the end of the development process. However, the greatest effect is achieved by running various test types in several intervals throughout all project stages.

The problem lies with expertise areas. Not all product creators have experience as software testers, which makes qualitative detection of errors a difficult task. In most cases, users will check the software's quality after the product has already been released to the market, and often find errors which the developers failed to notice and eliminate. Therefore, outsourcing testing services has become the go-to solution for many startups, companies, and large enterprises.

[Stelo Technology](#) is an Indian outsourcing company, specializing in software testing on the level of the world's leading companies. In order to improve their regular QA services, Stelo Technology has initiated an internal project named Defect Crawl. Every week, a random application is selected, tested, and exhaustively reported on. This enables Stelo's testers teams to develop new ways of detecting unusual errors in all possible categories of applications.

At the moment, Stelo Technology has tested over 100 iOS and Android apps through Defect Crawler and found more than 500 serious errors. Some of the tested services include:

- WeatherApps (a weather tracker and forecast service),

- DineEat (a social dining platform), and
- ChatMe (a side-by-side conversation translator app).

Some of the problems Stelo's testers faced during weekly Defect Crawls are:

- Authorization issues within apps,
- Inability to leave blank fields when filling out forms,
- Sudden app termination,
- Grammatical errors.· Slowness issues.· Compatibility errors.· Usability errors.· Workflow issues. What does this mean? Developers didn't pay adequate attention to testing their apps before releasing them to users. These mistakes mean dropping sales and losing their customers' confidence.

What to do? Apply the correct approach to software development at the very beginning. Trust the outsourcing company with complete access to your QA processes, and get a third-party view of how your app works on the user end.

Modern testing methods and diversity in approach make Stelo Technology a reliable partner in exactly such circumstances. Their expert testers identify and remedy any unusual errors, ensuring your product is clean, stable, and ready to use.

About

SteloTechnology services are a great fit for any company that relies on a properly functioning website or uses internal software (CRM, enterprise, custom, etc.) for its day-to-day operations. It may not always make financial sense to fully staff QA groups internally if they are not fully utilized year-round.

SteloTechnology QA On-Demand service provides a cost-effective solution to beef up your QA teams whenever needed.

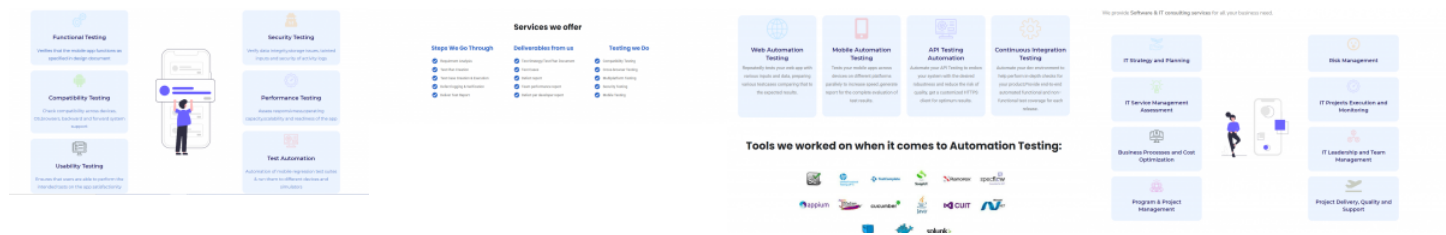

SteloTechnology clients range from small start-ups to some of the largest companies in the world. SteloTechnology has performed thousands of software tests for hundreds of clients across the globe specializing in things like website and mobile app testing with the help of Certified Tester With a focus on Process-based services and an on-demand scalable team capability.

SteloTechnology offers a comprehensive set of independent software testing & Project Management services to our global clientele in an exceptionally efficacious manner. We strive to offer the best and most cost-efficient services to our clients in a time-bound manner.

Build and deploy world-class Web & mobile apps for your organizations at scale and leave your Software System Quality us.
