

Word Clouds Made Easy! PresenterMedia releases a new word cloud generator for building word clouds online.

An online app to make words come to life for presentations, social media, and marketing. Read on to find out more details.

South Dakota, Sioux Falls, Oct 29, 2021 (Issuewire.com) - PresenterMedia, a leader in presentation designs, is excited to announce the development of their brand new online [Word Cloud Generator](#), released in October 2021. Included are some previews of word clouds generated from this new online tool.

What does the word cloud generator do?

Simply put, it takes words the user inputs and automatically fills a selected shape with the chosen words. In addition, it gives options to change colors, make important words more prominent, and modify the layout of the words.

New Features Coming!

PresenterMedia says they plan to keep innovating this word cloud generator by adding the ability to create an animated word cloud and make a word cloud from a word. Depending on when you are reading this, those updates may already exist.

“We want to empower anyone making presentations by giving them powerful tools to create presentation designs that will engage their viewers easily. We strive to innovate by creating tools like our online graphics customizers, online video maker, and newly added word cloud generator,” explains Judd Albrecht, Co-Owner and VP of Design at PresenterMedia.

Here is a short description of how PresenterMedia’s new online word cloud generator works.

The app is assessable by loading pre-designed word cloud layouts, or there is an option to start a word cloud from scratch.

Once inside the app, users can add their own words by editing existing words in a premade layout or paste a paragraph of words that the generator will use.

From there, a person can change colors from premade themes or choose their desired colors. At this time, a person can also select a background color.

Finally, a person chooses the shape they would like their words will fill. With all their preferences now selected, they click download to get their newly created custom word cloud.

Graphics Customizer Integration

PresenterMedia takes word cloud generation to a new level by allowing the user to insert a saved word cloud image into a specialized, customizable graphic. Then this graphics is rebuilt with the word cloud-integrated as part of the new graphic.

About PresenterMedia

PresenterMedia is a world-class presentation resource with unmatched value. They provide vibrant animated designs, [animated PowerPoint templates](#), and powerful tools to help presenters give their audience excellent presentations time after time. With over 20 years of experience in PowerPoint template design, they know what it takes to help their customers save countless hours creating fantastic presentation designs.
