

From Beta version to British Awards. Mind Bank Ai wins 2021 Best Digital Software Company

The world's first Personal Digital Twin platform was voted this 2021's Best Digital Software Company - Florida, by the British magazine Global Health & Pharma while still in beta.

Miami, Florida Nov 9, 2021 ([Issuewire.com](https://www.issuewire.com)) - This year winners of GHP Magazine's Healthcare & Pharmaceutical Awards have just been announced and among the hundreds of nominees, the completely remote-based tech startup Mind Bank Ai wins as the Best Digital Software Company - Florida.

At a moment when "vaccine" is close to becoming the most pronounced word of the year, the importance of healthcare is bound to not be neglected anytime soon. GHP Magazine is on a mission to recognize companies that are focusing their efforts on protecting humanity and that is the underlying motive behind giving out these awards, which have been going on for 7 consecutive years now. Standing aside Mind Bank Ai, there are many other companies that stood out in their field for reasons ranging from the R&D of innovative new products to the development of exceptional healthcare services

that exponentially contribute to the holistic improvement of healthcare.

The nomination for this award already meant that Mind Bank Ai's work in moving humanity beyond was not flying under the radar. However, being voted the Best Digital Computer Software boosts Mind Bank Ai's confidence that its Personal Digital Twin technology could actually be crucial for the future well-being of humanity. This will be made possible by the company's goal of developing a platform that will allow combining cognitive, biometric, and genetic data in a fully holistic view of the human, providing longitudinal data for personal and medical use. This technology is "transformational" on many levels, including a healthcare perspective where people will be able to increase their ability for self-care and professionals will be able to employ longitudinal data on their patients like never before.

Emil Jimenez, MindBank AI founder and CEO, says "Winning this award is extremely satisfying for me and the team but our measurement of success is when Mind Bank Ai is helping humanity on another planet."

This Best Digital Computer Software Award comes at a time where the beta version of Mind Bank Ai's first personal digital platform is about to be launched in the market and assures the company of the greater potential of its technology for the well-being of mankind. The world is walking towards a future of Ai-enhanced humanity and this Award gets Mind Bank Ai one step closer to becoming the world's most trusted guardian of your Personal Digital Twin. Let's go beyond.

About Mind Bank Ai: *Mind Bank Ai is a Personal Digital Twin platform that uses structured learning algorithms of your knowledge in order to enhance human productivity and longevity. The digital twin learns by asking many questions while giving the user valuable insights into their personality and achieving immortality through data.*
