

Local anesthesia drugs market size, share By 2021-2028

Market Overview The global local anesthesia drugs market is predicted to reach growing at a CAGR during the forecast period (2021-2028).

Albany, New York Nov 10, 2021 ([Issuewire.com](https://www.issuewire.com)) - Market Overview

The global local anesthesia drugs market is predicted to reach growing at a CAGR during the forecast period (2021-2028).

Local anesthesia is the temporary loss of sensation in a particular body part, or a localized areas. Local anesthesia drugs are given in order to treat the painful situations for the elimination of pain while performing any major or some minor surgeries, or also to eliminate pain post-surgery.

Market Dynamics

The surge in cases drives the global-local anesthesia drugs market growth to perform surgeries and improve drug delivery. Computer-based local anesthetic delivery and vibrotactile devices are estimated to boost the global-local anesthesia drugs market's forecast period.

The increase in the number of surgeries is expected to drive growth in the forecast period

Anesthesia is one of the essential components of any surgical procedure. It induces temporary unconsciousness and loss of protective reflexes. According to the Centers for Disease Control and Prevention (CDC), more than 51 million inpatient surgeries and 53 million outpatient surgeries were performed in the United States in 2017. Cardiology, surgical, and obstetrical procedures were the most common ones. In Europe, many surgeries are being performed for cases of cataracts, tonsillectomy, colonoscopy, cesarean sections, and hip replacements. Besides, several procedures, such as cochlear implantation, laparoscopic colectomy, laparoscopic hysterectomy, secondary hip replacement, and knee replacement, have become more frequent in recent years. Hence, the overall increase in the number of surgeries performed has a strong impact on the anesthetic drug market. These drugs are used in all surgical procedures to reduce pain during surgery.

Rising prevalence of cardiovascular and respiratory system-related diseases expected to drive the market growth

Factors such as the rapid rise in the aging population, rising prevalence of cardiovascular and respiratory system-related diseases are key factors driving the market's growth. The state allows surgical operations and other medical processes to be carried out on patients without causing them undue distress or discomfort. Surgical operations of the eyes are performed using a wide variety of anesthetic techniques. Advancements in drug delivery technologies are also expected to contribute to the demand for local anesthetics in surgical procedures. For instance, DepoFoam technology uses a new method to deliver bupivacaine and is very efficient in managing post-operative pain. The market growth for local anesthesia drugs is also fueled by introducing new and effective drugs such as articaine, levobupivacaine, and ropivacaine. This growth is supplemented by increasing healthcare expenditure in developing countries such as India, China, and Brazil, where the number of surgeries performed has been on a steady rise. These factors are driving the growth of the market in the forecast period.

The major side effects of drugs are likely to hinder market growth.

However, some major side effects of drugs, such as cardiovascular toxicity, CNS toxicity, and respiratory depression, are among the significant factors that pull back the market to achieve its full potential in the global-local anesthesia drugs market.

Several quick changes in response to COVID-19 have had an immediate impact on local anesthesia drugs and their practices. While some of the disruptions are temporary, others will persist over the

longer term. Economic shocks are already evident for the supply chain and anesthesia workforce, and some temporary shocks may return with anticipated future waves of COVID-19. The first and most challenging impacts are due to the canceling or postponement of non-essential surgical procedures. This reduction has a direct negative financial impact on anesthesiology practices and can lead to workforce reductions for practices that specialize in these types of procedures. Different anesthesia methods may be required to reduce medications use to support patients on ventilators for procedures that are still being performed. Nerve blocks and local anesthesia are other options that can be considered. Another disruption is the surging demand for non-essential procedures that have been delayed by the pandemic. Once the pandemic wanes, procedures that have been postponed will need to be rescheduled along with others. This will lead to an increased demand for the local anesthesia drugs market.

Segment Analysis

By Drug Class

- Bupivacaine
- Lidocaine
- Benzocaine
- Ropivacaine
- Prilocaine
- Chloroprocaine
- Others

By Route of Administration

- Injectable
- Surface Anesthetic

By Distribution Channel

- Hospital Pharmacy
- Pharmacy Stores
- Other

Geographical Analysis

North America region holds the largest market share global local anesthesia drugs market

North America region is dominating the global-local anesthesia drugs market accounted for the largest market share in 2020. The US anesthesia market is the largest regional market in the world. The market is mainly driven by factors, such as the increasing number of surgeries, rising aging population with increasing chronic conditions, and advancements in anesthesia technologies. Due to the rising scope of local anesthesia in the market, key players are making efforts to develop novel and innovative drugs, thus fueling the market growth in the region

Local Anesthesia Drugs Market

Competitive Landscape

The local anesthesia drugs market is moderately competitive with the presence of local as well as global companies. Some of the key players which are contributing to the growth of the market include Fresenius Kabi USA, LLC, Pfizer Inc., Advanced Pharma, Inc., Akorn, Inc. Teva Pharmaceutical Industries Ltd., Akorn, Inc., Glenmark Pharmaceuticals, Inc., Baxter International, Inc., and Novartis AG., among others. The major players are adopting several growth strategies such as product launches, acquisitions, and collaborations, which are contributing to the growth of the local anesthesia drugs market globally.
