

META FANTASY launches its leading-edge FantaGlass for the metaverse

New York, United States Nov 26, 2021 ([IssueWire.com](https://www.issuewire.com)) - Meta Fantasy has all seen the marvels of Augmented Reality (AR) and Virtual Reality (VR) in Hollywood movies and compelling commercials.

The privileged few can experience amazing pixel-free AR/VR experiences with state-of-the-art hardware such as Varjo's XR-3 for US\$5,995 and subsequently US\$1,495 annually by subscription.

But when will the AR/VR industry have its very own Ford Model T moment? In other words, when will Meta Fantasy has an affordable AR/VR device that can be affordably used by anyone?

FantaGlass by META FANTASY.

Following its partnership with Grayscale Asia-Pacific to develop the decentralized metaverse game, FantaVerse, META FANTASY released its first-ever official Mixed Reality (MR) FantaGlass

Refresh your world with a brand-new perspective with FantaGlass.

FantaGlass, which supports multi-OS and mobile devices, creates a truly immersive gaming experience for the interplanetary metauniverse, FantaVerse.

The FantaGlass product name takes inspiration from both 'Fancy' and 'Fantasy'.

FantaGlass is not just limited to indoor use as its lightweight tinted visor design also makes it naturally outdoor-friendly. Imagine seeing high-resolution digital vision super-imposed on any outdoor scene just like how the bank teller played by Ryan Reynolds experienced the open-world video game in the movie, FREE GUY. Outdoor Mixed Reality (MR) interactivity is a part of the FantaVerse development roadmap.

FantaGlass is everyone's entrance into FantaVerse. FantaGlass also supports third-party VR and AR apps, offering a world-class immersive experience with the following specifications:

- Lightweight: 85g lightweight design.
- Portability: 90-degrees foldable just like sunshades for easy storage.
- Resolution: Full Immersive experience with true 4K resolution 3840x1920 and 43-degree FoV (Field of View) per eye.
- Contrast Ratio: 100,000:1
- Audio: HD Directional speaker x 2 (left and right).
- Microphone: High-performance noise-canceling mic.
- Diopters: Myopia adjustable from 0.00D to -5.00D.
- Compatibility: Mobile devices, PC, and 4G/5G data networks.
- Sensors: Proximity sensor, enhanced 9-axis (Magnetometer, IMU), supports sensor fusion.
- AI Interaction: AI voice recognition via built-in mic.

FantaGlass allows anyone to dive directly into FantaVerse. It single-handedly fixes the largest hurdle preventing people from participating in the metaverse, at an affordable price.

One key and unique feature of FantaGlass is its support for in-game virtual social interaction where any two players can communicate face-to-face and even voice-chat using a variety of AI-enhanced voices.

Immersion into the FantaVerse with FantaGlass.

The single most important VR/AR gaming accessory is the one you wear on your head to immerse yourself in any game.

The thrill of VR/AR gaming comes from its first-person viewpoint and each player's ability to navigate, view, and manipulate the virtual environment.

Unlike regular video games, which typically employ the first-person or third-person viewpoint on a display, gamers can now really see and experience the action directly with their very own eyes through FantaGlass.

Armed with FantaGlass and a smartphone, a user can log into FantaVerse from anywhere in the world.

For more direct input and control, a variety of handheld controllers may be used to translate the player's real-life movements into on-screen action.

META FANTASY envisions a world that combines reality with VR through leading-edge smart glasses and resources such that there will come a time when one can no longer distinguish between real and virtual objects.

In order for VR to be realistic, it needs a huge inventory of high-quality scanned and modeled 3D objects. The only practical way to quickly build up the inventory is to mobilize the wisdom and creativity of the masses. Without a complete understanding of the real world through data-driven incentives and

economy models, no metaverse platform will gain significant adoption.

META FANTASY is therefore utilizing the full suite of BIGANT technologies to drive the adoption of FantaVerse by creators, gamers, and traders alike.

Meta Fantasy hopes to herald a whole new 3D universe where everyone can enjoy playing, creating and contributing to the FantaVerse ecosystem by bridging cost barriers whilst making mixed reality gaming truly impactful.
