

Negate the Harmful Effect of the 5G Radiation with Environics Designed Envirochip

Environics provides effective 5G radiation management solutions to negate the harmful effects of the 5G radiation emanating out of smartphones.

Gurgaon, Haryana Nov 30, 2021 (Issuewire.com) - Since its inception in 2007, Syenergy Environics Ltd. is constantly engaged in the field of 2G, 3G, 4G, and **5G radiation protection** to enhance the wellness of the people. The company launched its flagship radiation protection product called Envirochip in October 2018 that protects human health from the harmful effects of electromagnetic radiation. The company is constantly engaged in developing technologies along with innovative products and services to negate the harmful effects of radiation without absorbing, or stopping it, thereby leading to healthier homes and productive workspaces.

Fifth Generation or 5G is a set of standards for a cellular network that is significantly faster than the previous ones because it has faster transfer rates and shorter delays. This next generation of wireless communication technology is not specific to any frequency and operates across a wide range of the RF spectrum. This cellular network is expected to soon gain prominence in India and so its supposed health hazards are raising concern among the people. The common perception among people is that 5G causes cancer and 5G-emitted radiation weakens the immune system.

Environics designed Envirochip is a highly effective radiation purifier that negates 5G radiation risk. **Radiation protection** technology in Envirochip protects people from electromagnetic radiation. The transmitter density required for 5G will expose more people to radio frequency electromagnetic fields and at levels that are potentially harmful to people's health. The company's radiation protection technology has been internationally tested and certified by several scientific and medical institutes in India and abroad.

In the rapidly evolving world, everything is being revolutionized by wireless communication technology that is allowing people to have several tech-enabled ways to make their life comfortable. Nevertheless, the same technology has several adverse impacts like exposure to 5G radiation that causes serious health issues. Thus, to save people from the harmful effect of 5G radiation and safeguard their health, Environics offers research-based radiation protection products that have been internationally acclaimed for utility and effectiveness.

About the Company - Syenergy Environics Ltd. incepted in the year 2007 is continuously working creating indigenous technologies-based innovative radiation protection products and services to negate the harmful effects of natural and manmade radiation without absorbing or stopping it. The company

aims to provide its customers with the protection devices that they need to protect themselves from harmful radiation.
