Market Dynamics

Increasing concerns among pet parents about the well-being of their pets are expected to drive the market's growth.

According to the article, in December 2020. The growing trend of pet humanization has increased, and to know the pets' condition, the companies are launching new technologies. For instance, researchers at Imperial College London have developed a first-of-its-kind health-tracking sensor capable of detecting life signs through fur and up to four layers of clothing.

The new type of sensor could help owners keep track of their pets' health in real-time, without the need for direct skin contact or shaving, making everyday wearables for pets and farm animals perfectly possible – and indeed probable. The technology is just as pertinent for human use as the device can be worn over many layers of clothing without compromising the performance of the overall system. Moreover, wearables are expected to play a major role in monitoring health and detecting diseases early.

Imperial researchers believe that the technology is used to establish certain benchmarks for resting heart and breathing rates with the new acoustic wireless sensor at the ready. By measuring vital signs before and after a find, the level of excitement can be quantized. This way, baseline condition is used to identify potential bomb spots and missing persons by determining exactly how sure the dog is of its discovery. Thus, the practical benefits of wireless acoustic sensors are as remarkable as they are varied; and these are the factors expected to drive the market in the forecast period.

Market Segmentation

Global Pet Wearable Market – By Product

- Smart Collar
- Smart Camera
- Smart Harness and Vest
- Others

Global Pet Wearable Market – By Technology

- RFID
- GPS
- Sensors

Global Pet Wearable Market – By Application

- Identification & Tracking
- Behavior Monitoring & Control
- Facilitation, Safety & Security
- Medical Diagnosis & Treatment

Global Pet Wearable Market - By Region

- North America
- South America
- Europe
- Asia Pacific
- Middle East & Africa

Competitive Landscape

The pet wearable market is vast with the presence of local as well as global companies. Some of the key players which are contributing to the growth of the market include Dogtra, Fitbark Inc., Mars Incorporated (Whistle), Loc8tor Ltd, Garmin Ltd, Allflex USA Inc., Avid Identification Systems, Inc., Datamars, Trovan Ltd., Konectera Inc., and Invisible Fence. The major players are adopting several growth strategies such as product launches, acquisitions, and collaborations, which are contributing to the growth of the pet wearable market globally.
