

PreludeSys and Microsoft Azure is the Combo that Modern Businesses Would Need In Future For Cloud Enablement

Irvine, California Nov 23, 2021 ([IssueWire.com](https://www.issuewire.com)) - As a renowned cloud service provider in the industry for decades now, PreludeSys announces its **Golden Partnership with Microsoft Azure** recently.

This IT services company has been offering the best of Digital Transformation services like Cloud Enablement, AI-powered Chatbot Development solutions, Legacy Application Modernization, and Power BI to their valuable customers. Having worked with a lot of organizations across the globe for decades now, PreludeSys' expertise lies in meeting the present needs and expectations through delivering cloud computing solutions using cloud enablement strategies to develop and deliver efficient and safe cloud spaces for modern businesses. Several organizations and enterprises have already embraced cloud technology and few are in the process and PreludeSys carefully understands the business requirements of their customers and design and develop a secured and reliable cloud platform.

[PreludeSys](#) executes the cloud-first approach which is the new normal that enables organizations and enterprises to be prepared for the future through next-gen solutions that leverage various state-of-the-art tools and strategies. Many decision-makers have come to the realization that adopting the cloud is the fastest and easiest way to achieve Digital Transformation and give them the competitive edge they need after the unprecedented events that happened in the past year. The rampant pandemic impacted the IT industry to an unimaginable extends that made industry leaders rely on technologies that would help them keep the business going. And cloud computing is undoubtedly one of the very few technologies that came to rescue these organizations in terms of business continuity that continued to stay for almost forever as they proved to be more and more efficient, reliable, and a lot less cheap than working on-premise.

By leveraging the best of Microsoft Azure Cloud services like cloud enablement desk, cloud enablement framework, and cloud enablement consulting, PreludeSys help organizations to come up with a strategic plan to migrate their digital business operations to the cloud that results in better flexibility and cost savings. A good cloud migration strategy should comprise of short-term goals like cutting down the hosting costs, and long-term goals like the better alignment of IT and business objectives. Since one particular solution cannot solve all the challenges, there are different cloud migration service offerings from which organizations can choose the one that fits their business well.

PreludeSys offers different cloud migration strategies like Rehosting, Refactoring, Revising, Rebuilding, Replatforming, and Replacing using the Azure cloud services that are always customized to cater to the functional and operational needs of the customers and based on the nature of their business. Each business has different needs and these strategies are designed and planned to achieve the business outcomes they want. Few businesses may just want to make use of the 'rehosting' or 'lift and shift' approach which is the least expensive of all and an immediate one to migrate their apps, data, etc. to the cloud. However, others would need a much particular approach like 'refactoring' where the app is redefined to include more advanced features, improve performance or enhance scalability. Unlike rehosting, this one is often time-consuming and expensive. But this could be a benevolent one for businesses that needs it to be digitally transformed.

PreludeSys, as an industry player in the market for decades, has ample experience in carefully

analysing what is that an organization or enterprise wants in terms of migrating to the cloud. The team of cloud experts at PreludeSys offers the best cloud suggestions after they gather all the business requirements and enterprise cloud enablement problems the customers face. Instead of simply providing similar solutions to all of them, PreludeSys ensures to offer solutions and suggestions like what all to migrate to the cloud, what all they could achieve when they migrate to the cloud, what is the best approach to migrate to the cloud, and even the need to migrate to the cloud. This means PreludeSys helps in overcoming the cloud migration challenges like:

- Devising a plan
- Choosing the best approach
- Gathering a skilled team
- Testing and validating
- Executing and maintaining

Without having these challenges sorted out, it is quite impossible to achieve all the benefits that come with cloud migration. In that case, businesses need a reliable cloud service provider and a set of state-of-the-art tools and technology that will help them migrate to the cloud smoothly and quickly. This is where PreludeSys and Microsoft Azure come into the picture to develop, maintain, and orchestrate the best cloud enablement tools.

As mentioned earlier, PreludeSys provides not only cloud migration solutions but also suggests other cloud computing services that could help the end-users to choose what is it that they want for their business and the goals to achieve with the cloud. These cloud computing services include [Cloud Enablement](#), Cloud Monitoring, and Optimization, Cloud Assessment, etc. With these advanced and reliable cloud services, we help organizations to build intelligent cloud-native innovations. Our strategic delivery model consists of:

- A well-structured and security-focused approach right from planning to execution
- Tailor-made cloud solutions to achieve continuous performance, streamline operations, and leverage all cloud capabilities
- Enable digital transformation by ruling out the complexities in managing legacy applications

PreludeSys does not stand out from other cloud service companies only because of these advanced cloud service offerings but mainly because of the business outcomes that the customers are able to achieve in the long run. This prime combination of PreludeSys' strategic plans and Microsoft Azure's avant-garde tools and technology may seem to be an expensive investment for many. But, in reality, this is an affordable service that businesses of any size can avail of as it is based on a pay-as-you-go pricing model. Unlike other cloud services, Azure offers services on a subscription basis where the customer has to pay only for the services and tools they use which makes it feasible for small and mid-sized companies and start-ups and helps them make substantial cost savings as well.
