Networking for people

THINGBOOK.io  
The easy path to ML

**Dublin, Ireland Nov 30, 2021 ([Issuewire.com](http://Issuewire.com))** - Thingbook.io is proud to announce that the company is joining forces with leading advanced networking service in Latin America, Auben Networks to form a stronger strategic alliance in order to target AI opportunities in the Telecom space. Their joint venture is going to help telecom companies avail of deeper network visibility. They will also be able to accelerate AI consumption through industrialized AI Technology. The networks will be automatically monitored by the AI algorithms to flawlessly detect and predict real-time anomalies in them. The innovative implementation of AI in telecom improves the network infrastructure of any telecom company.

The use of AI in the telecom industry is not a new concept but Thingbook.io is determined to help Auben networks achieve the highest peaks of the industry using the full potential of its exceptional AI technology. The company will be using its highly advanced algorithms to look for specific patterns within high-speed data environments. That way telecom companies will be able to know about all the network anomalies instantly and fix the issues before they make a huge negative impact on the network.

The CEO of Thingbook.io, Ltd., Roman Ferrando said, 'After a few months working behind the scenes, it is my pleasure to announce that our Time Series AI pipeline platform is currently accessible through AULBEN Smart FI for Smart Network Operations. Network Operations is becoming more challenging than ever before as the variety of new services and applications make it impracticable to achieve the Network Visibility required to mitigate issues and threats. Our technology manages thousands of models simultaneously providing 360 degrees of the network visibility.' Auben Networks' CEO Matias di Blasi explained, 'The addition of automated AI capabilities to our portfolio will give us a significant competitive advantage in the marketplace and will allow our customers to operate faster and more efficiently than

ever.’

The use of AI in telecommunications is higher than ever right now. The global market for the industry has expanded to a massive scale in just a few years. Most of the world’s biggest telcos are now using AI technology to increase the accuracy of their data analyzing process. The new partnership between Thingbook.io and Auben Networks will help the biggest CSPs in the world to reach their highest technological potentials. Due to its bright possibilities more and more companies are now investing in incorporating AI technology in telecom.

Both companies will make the networks function more accurately when the maintenance becomes harder. The AI algorithms provided by Thingbook.io along with Auben Networks will fix the issues before they happen. Together they will build self-optimizing networks that will be monitored by AI algorithms automatically and have a much stable performance. The telcos will be able to offer 24x7 uninterrupted services to their customers with their joint project. They will be able to detect frauds and prevent them before any sort of malicious attacks with the latest AI technologies. All the issues can be fixed at the early stages with the help of their new technology.

The companies are swiftly increasing their EMEA and LATAM operations and strengthening their current penetration in strategic accounts with the alliance. The other aspects in the telecom industry like order processing, data entry, billing, and more can also be done more efficiently with the help of AI technologies. The results are more accurate and error-free this way. The telecom industry can only gain and grow for better with the brilliant AI technologies provided by Auben Networks.

Thingbook.io is an Ireland-based next-generation AI company that provides Anomaly Detection and Predictive Capabilities in real-time at scale for high-speed data environments. And Auben Networks is an Argentine-based networking company that has been delivering Advanced networking services and helping the largest CSPs in the world for quite a few years. The companies have recently formed a league to provide top-quality customer services satisfying their every need and requirement. They will provide thorough network analytics so that telecom companies can get meaningful data to further improve their services. The data-driven approach to telecom will bring a wave of newer possibilities in the industry. For more information, visit their website [www.thingbook.io](http://www.thingbook.io).
