

# Travis Hills MN Created Optimum Configuration to use Disinfection Abilities of Technologies

This Press Release is written to inform the readers that Travis Hills MN created optimum configuration to use disinfection abilities of technologies.

**Minnesota, Saint Paul, Nov 1, 2021** ([IssueWire.com](http://IssueWire.com)) - [Travis Hills MN](#) makes his best efforts towards the development of an effective ballast water treatment system. This system only uses electricity and the steps combined inline the moving stream of ballast water in real-time with no byproduct. He makes sure that each method is highly effective.

He created and patented the optimum configuration to use the disinfection abilities of technologies in series to achieve 100% kill. This system makes use of gases like carbon dioxide and argon that not only saves money but also eliminate the use of dangerous solvents.

He has been associated with Machinery Company where he develops and rolls out the laboratory extraction apparatus with a higher efficiency of extraction to be rolled out by an OEM like Thermo Fisher.

Adding more to his expertise, **Travis Hills MN** has been a result-driven biochemist who assists his team in research and experiments in an effort to better understand how chemical processes affect life forms. Besides, he designs and executes experiments, records and analyzes data, and presents or makes recommendations based on findings.

## About Travis Hills

**Travis Hills** is aimed at developing a water purification system where he develops a sustainable and zero-polluting water purification system. It is lower in energy use than any technology in commercial use or in development. Besides, he deals in frac water patents and cleaning technology to take the raw sewage water or oil/frac water, treat it and make 100% safe drinking water.
