

Web Bluetooth browser - Bluefy. Efficient solution for iOS users with BLE experience

Bluefy has announced updates for 2022!

Kiev, Kyiv Nov 23, 2021 ([Issuewire.com](https://www.issuewire.com)) - Bluefy is an application that is only available for iOS devices. It is a Bluetooth web browser that allows users to implement custom solutions for their Bluetooth devices in one application. Users can implement such solutions through a special web page. In addition, Bluefy browser provider developers with the ability to create web solutions that will work on all iOS devices. Users can imitate the capabilities of native applications, such as standalone operation,

notifications, and other features.

At the end of November, Bluefy developer announced the release of new updates for 2022. The application is being actively updated, and the support service works effectively with users to create new solutions.

Updates in the design. Minimal but effective.

The search bar has been moved down, which is more familiar to iOS users. The logo is reduced in full-screen mode, removed, which is done for user comfort.

Functionality - even more features

Users can add and create folders, and organize their experience in Bluefy. In the application, you can add Favorite and frequently viewed sites. Thus, many updates will affect the browser itself. The developers have introduced the Full-screen mode in order to imitate THE behavior using the full-screen feature. In addition, a Download manager will appear, now users can view their downloads and select folders to save downloads.

Updates should be expected in January 2022. Perhaps these are not all updates from the developer. You can get acquainted with the Bluefy app in the App Store.
