Quik.com announces launch of the largest blockchain based P2P NFT, Metaverse and Domain name marketplace

A simple platform that allows its users to list, sell and buy NFTs, Metaverse tokens and domain names through a blockchain based medium.

Bengaluru, Karnataka Dec 16, 2021 (Issuewire.com) - Quik.com is nearing its launch into the P2P industry with NFT, Metaverse, and Domain Name marketplace products. With the domain industry blowing up in recent years and short domains becoming hugely sought-after commodities sold in the millions of dollars, quik.com has arrived with the aim to push the domain name industry utilizing blockchain technology. A simple platform that allows its users to list, sell and buy NFTs, Metaverse tokens, and domain names through a blockchain-based medium.

The most prominent feature of quik.com is that all transactions on it will be done in Binance smart chain as well as Ethereum. This means that the users are ensured with better transparency, safety, and efficiency in their transactions.

A quick understanding of what QUIK offers is presented in this short video- WATCH VIDEO

Making a big move on the NFT space

NFTs have gained ever-growing popularity and continue to do so every single day. With unique artworks being sold for inflated and hefty amounts of money, quik.com is out to cater to the growing demands of an efficient P2P NFT marketplace.

Right from its launch, quik.com is equipped with a dedicated NFT space for its users to list, sell, buy and even auction their NFTs on a P2P marketplace. It is envisioned with creating a varied marketplace with dozens of big NFT players bringing in scores of unique NFTs to create a full-fledged and growing market soon.

To the Metaverse and beyond

With the introduction of Meta as the new face-name of Facebook and its ever-fascinating idea of a virtual world, the Metaverse and its tokens have taken flight in terms of popularity and exponential rise in demand. Quik.com focuses on catering to this niche with a whole section set aside for the trade or metaverse tokens and other related digital commodities.

Quik.com has opened up a wide variety of Metaverse and Metaverse-related tokens, currencies, NFTs, etc. that will be available for open listings and auctions alike. With the increasing interests in Metaverse and its related digital assets, quik.com will launch as an efficient solution to the growing demands.

Also, all of the transactions are based on Ethereum and Binance smart chain. This will ensure a decentralized market that will impart a sense of security and privacy to its users.

Catering to the original NFTs; Domain names

Domain names have been used to register and run websites ever since the advent of the worldwide web. Since domain names were unique and could not be replicated, they were the original NFTs with individual ownerships. Also, with the internet being an ever-growing cluster of websites, the demand for domain names will not be dying out anytime soon.

Quik.com looks ahead to launch as a domain name marketplace that runs on blockchain-based transactions. With the domain name industry predicted to reach a trillion dollars in value towards the year 2027, quik.com looks forward to being the cause of major blockchain disruption in the domain name industry.

Quik.com will effectively be a marketplace for users to list, buy and sell their domain names on the Binance smart chain as well as the Ethereum blockchain.

With the evolution and acceptance of a Web2 which caters as a pathway from Web3, quik.com will have a section for decentralized blockchain domain names as well. It will be a supporter of the ideology of a decentralized web where users and website owners have a sense of security, untraceability, and control.

Conclusion

Quik.com is being launched as a P2P marketplace with a huge variety of NFTs, Metaverse tokens, and domain names of all kinds such as TLDs (Top-Level Domains) and CLDs (Country Level Domains). It will solely be based on blockchain transactions such as Binance smart chain and the Ethereum blockchain making it a cross-chain platform.

It will allow its users to list, buy and sell various digital assets in an efficient way with a faster experience fueled by the guarantee of security, safety, and anonymity provided by the decentralized blockchain system.
