

Robotic Hi-Tech Solutions – Specialises in Machining Robot and Milling Robot to Deliver Unmatched Industrial Solutions

Tallinn, Harju Dec 9, 2021 ([Issuewire.com](https://www.issuewire.com)) - Robotic Hi-Tech Solutions is a prominent company, with a reputation for robotic machining and turnkey CNC automated solutions. From designing to robot integration, building machines for production, and installation, the entity goes one step ahead to find top-notch industrial solutions for numerous applications. The range of services includes 3D printing robots, industrial robots, new and refurbished robots, and robotic palletizing, with premium components, cutting-edge technology, and reasonable price. They provide milling standard packages or all-inclusive custom solutions to suit clients' needs. A team of professionals takes care of all steps, starting from assembling equipment in the warehouse to programming and training personnel. To know more about the company and its services, please visit: <https://www.robotic-hitechsolutions.com/>

Robotic automation is one of the most sought-after technologies across the world. This widespread industry has evolved since then with CNC machining process and robotic machining to fit numerous applications. It includes robotic milling, trimming and cutting, robotic grinding, deflashing of casting and forgings, finishing, polishing, and robotic deburring. It brings innovative manufacturing practices to the forefront that will have a great impact on productivity, flexibility, consistent quality, and reduction in cycle time. It has some crucial technologies, including process development, tooling, fixtures, controls, and programming software. Robotic machining is basically the use of industrial robots to automate and streamline repetitive manufacturing processes.

Robotic Hi-Tech Solutions is a renowned company for [milling robots](#) and [machining robot](#) systems, designed with ultra-precise equipment and advanced programming to deliver the best results. The entity offers 5 series of standard configurations, including a robot, a machine with a rotating table, a robot with a linear track, a mechanism with a linear track and table, and a robotic educational cell. The fields to use include prototype construction, lightweight forms, machinable aluminium, trimming, and related processing. All robotic systems go through an intense restoration procedure and are integrated with a value pack to meet various application conditions. Experts can help manufacturers minimise machine downtime, increase production rates, and review products to ease operations.

Robotic machining provides ultra-precision calibration and a fully integrated 3D system for a variety of applications, including large-scale sculptures, marble machining, medical, metal milling, plastic trimming, marine, and varied industrial purposes. They are specialised in 3D concrete printing, starting with hardware, software, and additional educational materials to streamline the complex construction process. They have introduced a robot 3D moveable printer or fixed robot printer for various site usage,

effectively controlled by Sprutcam software. The entity offers a full-fledged turnkey solution for a robotic palletizer at a special price, thanks to an HMI panel with dedicated software. The cell includes a complete package of the used or new robotic system, gripper, pickup conveyor, external cabinet, pallet holder with sensors, robot base, installation, and training.

About Robotic Hi-Tech Solutions:

Robotic Hi-Tech Solutions is a prominent company specialising in robotic machining, 3D printing robot, robotic palletizing, and industrial robots. Ranging from designing to building machines for production, robots integration, installation, and training, a team of professionals have clients' back at every step to help them find the best solution for multiple applications.

Address & Contact Details:

Address: Roosikrantsi tn 2, 10119 Tallinn

Reg. Nr. 12938266

Phone: +3726027434
