SUN platform — the world’s first multi-currency NFT investment platform

Afono, Eastern Dec 13, 2021 (Issuewire.com) - NFT market ushered in explosive growth in 2021. According to Nonfungible data, NFT market transaction volume in the second quarter of 2021 reached 754 million US dollars, an increase of 3453% year-on-year/month-on-month. In addition, the global payment giant Visa announced the purchase and collection of NFT digital artwork CryptoPunks for US$150,000; Facebook is also considering launching a digital wallet while building NFT functions. With the active entry of giants, NFT is expected to enter the era of explosion.

For many early-stage investors, the cumbersome steps of the NFT market are retreating. Furthermore, there are hundreds of NFT projects on the market contending, and the product specifications are so large that it is difficult to know in detail in the short term. Consumers need to go to different pages for operations before they can finally invest.

Sun, the world’s first multi-currency NFT investment platform, launched on December 13, 2021, was born to solve the above-mentioned pain points and simplify the investment process. Consumers can invest through the SUN platform. Through a simple menu design, clear It clearly explains the operating rules of the product, so that consumers can understand the products they invest in in the most efficient way, without time-consuming and labor-consuming. The development of any financial system in the world is inseparable from an opportunity-the platform effect. The emergence of Sun provides a brand-new possibility for the NFT ecosystem, a platform development model. Sun provides more benefits for users through quantitative investment through platform development. For users, they only need to enter Sun to participate in multiple high-quality projects. The platform can realize the two-way choice of buyer's market and seller's market, and provide both parties with the most direct resource and traffic support. This kind of support allows any participating A role obtains more efficient resource utilization efficiency.

SUN can use mainstream currencies in the pool such as BTC, ETH, FIL, BNB, SHIB, NFT, DOGE, AXS, USDT, etc., to form opponent order books on major decentralized exchanges, smart contract system deep learning algorithms, automatic search, and selection Arbitrageable transactions, for uninterrupted liquidity injection and real-time change transactions, obtain market transaction fee dividends, transaction time differences, and free losses from counterparties.

At the same time, liquidity mining can be carried out based on the SUN pledge, and the SUN platform governance token ST coin can be mined without compensation. Users can flash into mainstream cryptocurrencies on the platform or conduct secondary transactions on PancakeSwap.

Encrypted finance is gradually entering the traditional market, juxtaposed with existing investment products, and its return on investment is higher, and it can be profitable anytime, anywhere. For the non-currency circle, the journey of investing in encrypted assets is just about to begin. Quantitative trading tools are bound to become the general trend. Therefore, choosing appropriate investment tools to avoid being interrupted by transactions that are carried out all the time, complicated technical terms, and transaction processes that are not humane enough will be the basic standard for investors.

Sun has received investment from Multicoin Capital, Defi Alliance, IOSG Ventures, Ethereal Ventures, Krane Ventures, and other institutions. It is currently the best NFT market investment platform on the market, with simple operation and high yield. Choosing a betting pool of different circulation properties can obtain stable income. In the future, SUN will be committed to ecological construction and provide users with more application possibilities.
