

United Nations General Assembly declared 2021-2030 the decade of healthy aging

Do you want your older parents to live with you or will you go for an old age home care service for them?

Sugar Land, Texas Dec 7, 2021 ([Issuewire.com](https://www.issuewire.com)) - Aging! We are all aware of, is the fair or poor health conditions that occurred in the 50s or the early 60s respectively. However, a few in their 80s live like those in their 30s, need not much attention and care. Study shows that 52% of people turning age 65 will need some type of long-term care in their lifetimes. This figure could vary, depending upon the climate and other health-related issues or activities.

Keeping in mind this scenario, some of the older adults can manage their activities and health conditions at their best while others with low immune systems, metabolic syndrome/disorders show their worst to manage them in their healthy aging.

This is where an old age home comes in contact! At this point, adults who become more problematic with their behavior, mental health, and body conditions, are sent to old age homes. This may not be true in some cases but according to the research, Only 4.5 percent (about 1.5 million) of older adults live in nursing homes and 2 percent (1 million) in assisted living facilities. The majority of older adults (93.5 percent, or 33.4 million) live in the community.

This shows that most people opt to live in old-age homes on their own OR are sent to old-age homes by their families. Where some live happily while others lose their lives thirsting for the love of their children and grandchildren!

Keeping an eye on the gradual increase in poor aging, Primary Care of Telfair Sugar Land, Texas pays

its services to the older adults of the United States and gives respect to the rest of the aging people whom it can't reach or connect
