

Advanced BEP20 Token Generator for Binance Smart Chain Launched by Unicarve

Crypto project owners can use the new platform to instantly create and launch advanced BEP20 crypto tokens on Binance Smart Chain (BSC).

Boston, Massachusetts Jan 23, 2022 ([Issuewire.com](https://www.issuewire.com)) - Unicarve, a new no-code [BEP20 Token Generator](#), has been launched, allowing users to quickly generate cutting-edge BEP20 tokens without requiring any coding knowledge. Unicarve introduces a new generation of revolutionary BEP20 token generators to the market. It is the first token generation platform in the world to support all preferred token mechanics. According to a Unicarve representative, "token developers will no longer be forced to use pre-canned templates that are clones of other tokens but do not perform their intended function."

Unicarve allows users to personalize their token by selecting the mechanics that are most appropriate for their application. Token creators can create a simple utility token or a complex baby token that rewards in BUSD or DOGE. They can create deflationary tokens with limited supply or Safemoon-style tokens with automatic liquidity generation. They can enable built-in anti-whale features and charge fees for marketing and charity wallets in BNB or their own tokens. The options are truly limitless.

Unicarve is a market disruptor in the token creation industry, according to one of the platform's early users, due to its unrivaled flexibility. "I created a baby token that instantly rewards users in BUSD." In order to aid in price stabilization, I also included liquidity generation and buyback. And, based on the

reactions of investors, we appear to be on our way to the moon. I strongly advise you to use this platform. It is without a doubt the best way to generate BEP20 tokens in 2022."
