# Best Crypto to Invest in 2022: Why You Should Try to Look at D-ETF

**London, United Kingdom Jan 25, 2022 (Issuewire.com)** - Crypto has piqued the interest of both geeks and skeptic financial experts over the last five years. Businesses across the globe use digital assets for a variety of investment, operational, and transactional purposes. Even Wall Street's biggest names, like Bank of America, J.P. Morgan, and others, have entered the competition. It goes without saying that this has had a beneficial rippling effect on the sector as a whole, increasing the number of new investment opportunities available.

On the other hand, D-ETF is among the most important financial crypto solutions. The decentralized ETF is a good answer for even the most conservative and selective market participants because of diversification and lower entry barriers. Now is the time to examine all the features of D-ETF.

### Unlocking Novel Market Opportunities

Delving a bit into how D-ETF works, it is a Decentralized Exchange Traded Fund (D-ETF) controlled by a Decentralized Autonomous Organization (DAO). DeFi asset management is its best.

The DeFi-based investment vehicle allows one to put money into various crypto assets using a single token. Token holders utilize a voting system to decide which assets should be included in the D-EFT value. A voting model like this assures that every choice is democratic.

That's not all, though. To be implemented, decisions must attract at least four million $DETF tokens. All decisions also have to be approved by more than half the investors. Five million tokens have been kept aside to further secure the voting system. The tokens can be used to override and reverse the process in the event that the procedure is manipulated by malicious entities.

**Even More Enthralling Features That No One Has Seen Before**

After explaining the fundamentals of D-ETFs, let us turn our attention to the reasons why you should include a product like this in your portfolio:

**Lower Costs**

D-ETF has no management commissions, which is a major plus compared to traditional centralized ETFs. Also, they have high continuous costs, which can add up quickly. Regular fees at some investment firms can exceed 1% per month. The crypto ETF has no such tariffs.

Another advantage for D-ETF investors is that they only have to pay gas fees once. While investing in different cryptocurrencies results in different gas fees, D-ETF avoids this issue by utilizing a single DeFi token. This enables investors to save money on transaction fees.

**A Reward Scheme**

Furthermore, D-ETF includes a reward scheme that distributes 1.5 percent of general transactional volume evenly among token holders, which is something you've never seen before. This one-of-a-kind dividend yield structure provides consistent investment growth, and when it comes to finances, nothing beats collecting high dividends. There is no denying that risk is always present when it comes to investing or trading, but here it is significantly reduced.

**Trading Hours**

Unlike centralized ETFs, DeFi ETF tokens, such as D-ETF's native token, $DETF, can be traded 24 hours a day, every day. This contrasts sharply with centralized ETFs, which can only be traded during regular stock market hours. This kind of convenience is perfect for crypto investors who dislike having their deals limited for some reason.

**Pioneering Goals for the Project**

D-ETF is an ERC20 token with a total supply of 100 million tokens. The D-ETF team is working to have the token listed on major crypto exchanges by the second quarter of 2022. The final step is designed to increase demand for a token and draw more attention to the product itself, allowing it to thrive. D-ETF onboarded traditional top specialists from the sphere of traditional finance, such as ex-CFO of Merrill Lynch, Peter Olden, to get a multifaceted viewpoint. It goes along with the fact that the number of people using D-ETF is always growing. This makes the project even better.

### Next Steps to Wiser Investing

If you want to invest, you no longer have to worry about not having enough knowledge because of how quickly information spreads now. Make your journey as easy as possible while giving you a lot of chances to make money, that's what we want to do.

To purchase D-ETF tokens and gain full access to their features, visit the D-ETF.com website and connect your Metamask or Coinbase wallet. After completing these steps, you'll be able to purchase $DETF using USDC coins.

For further information on D-ETF, please reach out to the D-ETF team via the email address **business@d-etf.com**. Also, don't miss out on the opportunity to sign up and participate in our presale using the link below to unlock innovative market features: **https://d-etf.com/buy-d-etf**.
